

NTE2031 Integrated Circuit Seven-Segment Gas-Discharge Display Driver

Description:

The NTE2031 is a seven channel digit (anode) driver in a 16-Lead DIP type package specifically designed to be used with high-voltage, gas-discharge numeric displays. This device requires a low logic level to turn the drivers on with a low input current requirement of any 300µA typically, and is compatible with popular MOS chips.

Features:

- High Breakdown Voltage: -55V Typ
- Low Input Current for MOS Compatibility
- Operable from Either Positive or Negative Supply Voltages
- Input Clamp Diodes for DC Restoration
- Internal Pull-Down Resistors

Absolute Maximum Ratings: ($T_A = +25^\circ\text{C}$ unless otherwise specified)
