

## Thyristor Surge Suppressors - TO-92

### Description

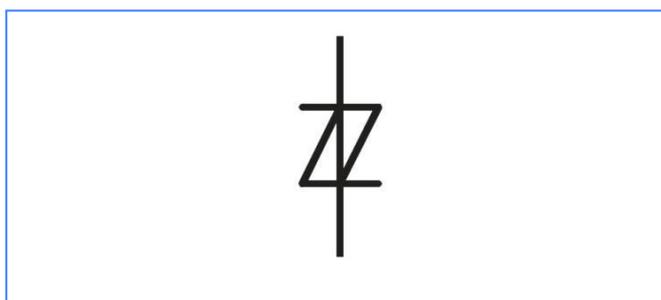

PxxxxE series thyristors are a type of semi—conduct component. They are designed to protect baseband equipment from damaging overvoltage transients. such as modems, telephones, line cards, answering machines, FAX machines, T1/E1, xDSL and more.

### Features

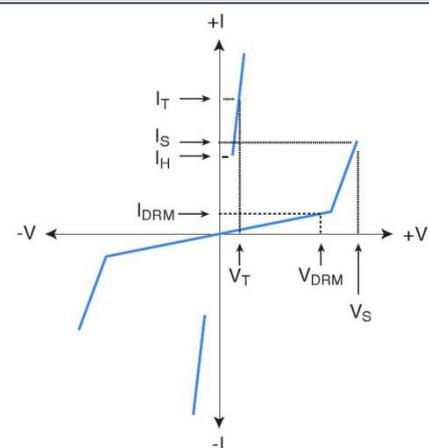

- Excellent capability of absorbing transient surge
- Quick response to surge voltage (ns Level)
- Eliminates overvoltage caused by fast rising transients
- Moisture sensitivity level: Level 1
- Fails short circuit when surged in excess of ratings
- Non degenerative

### Device Symbol

### Typical Applications

Parameter	Definition
$V_{DRM}$	Peak Off-state Voltage – maximum voltage that can be applied while maintaining off state
$V_S$	Switching Voltage – maximum voltage prior to switching to on state
$V_T$	On-state Voltage – maximum voltage measured at rated on-state current
$I_{DRM}$	Leakage Current – maximum peak off-state current measured at $V_{DRM}$
$I_S$	Switching Current – maximum current required to switch to on state
$I_T$	On-state Current – maximum rated continuous on-state current
$I_H$	Holding Current – minimum current required to maintain on state
$C_o$	Off-state Capacitance – typical capacitance measured in off state
$I_{PP}$	Peak Pulse Current – maximum rated peak impulse current

### Thermal Consideration

Parameter	Symbol	Value	Unit
Operating Temperature	$T_J$	-40 to +150	°C
Storage Temperature	$T_{STG}$	-40 to +150	°C
Junction to free air thermal resistance	$R_{\theta JA}$	90	W/°C

**Summary Electrical Characteristics, T a = 25 ° C (Unless Otherwise Noted)**

For individual "EA" "EB" "EC" Surge ratings, see table above

L : Lead-free

①V<sub>s</sub> is measured at 100KV/s

②Off-state capacitance is measured in VDC=2V, VRMS=1V, f=1MHz
