

Shielded Drum Core Inductor

PA4320 Series

- Height:** 10.0 Max
- Footprint:** 12.3mm x 12.3mm Max
- Current Rating:** up to 7.6A
- Inductance Range:** 10uH to 1000uH

Electrical Specifications @ 25°C – Operating Temperature -40°C to 125°C

NOTES:

- Actual temperature of the component during system operation (ambient plus temperature rise) must be within the standard operating range.
- The Saturation Current is the current at which the initial inductance drops approximately by the amount shown at the stated ambient temperature. This current is determined by placing the component in the specified ambient environment and applying a short duration pulse current (to eliminate self-heating effect) to the component.
- The Rated Current is the DC current required to raise the component temperature by the value shown. Take note that the component's performance varies depending on the system condition. It is suggested that the component be tested at the system level, to verify the temperature rise of the component during system operation.
- The inductance tolerance of the .104NLT / .154NLT / .334NLT / .474NLT / .564NLT / .684NLT / .105NLT and .155NLT are ±10% all other values are ±20%.
