Note 5-1 : Digital data input. DX0 is LSB and DX7 is MSB.

If parallel RGB input mode is used, D0X, D1X, and D2X indicate R, G and B data in turn.  
 If serial RGB or CCIR601/656 input mode is selected, only D07~D00 are used, and others short to Vss.

Note 5-2 :  $V_{DD2}$  Typ. = +5V

Note 5-3 : The output voltage is determined by the digital input data. If digital RGB or CCIR601/656 input mode is selected, The 8 gamma correction reference voltages can be set to externally or generate internally.

If VSET = "H", the gamma correction voltage generated externally

If VSET = "L", the default value is as below : (When  $V_{DD}$  = +5V)

	V1	V2	V3	V4	V5	V6	V7	V8
Default Voltage(V)	4.29	3.73	3.33	2.94	2.62	2.22	1.51	0.48

Note 5-4 : Horizontal sync input in digital RGB mode. Or HREF input in CCIR601 mode.  
 ( Short to Vss if not used )

Note 5-5 : Vertical sync input in digital RGB mode. Or V123 input in CCIR601 mode.  
 ( Short to Vss if not used )

Note 5-6 : Digital RGB data input format

For digital RGB input data format, both SYNC. Mode and DEN mode are supported. If DEN signal is fixed low, SYNC. Mode is used. Otherwise , DEN mode is used.

Note 5-7 :  $V_{CC}$  Typ. = +3.3V

Note 5-8 :  $V_{COM}$  Typ. = +6.0Vpp

Note 5-9 : ILED Typ. = 20mA., VLED Typ. = 9V

Note 5-10 :  $V_{GH}$  Typ. = +15V.

Note 5-11 :  $V_{DD1}$  Typ. = +3.3V.

Note 5-12 :  $V_{EE}$  Typ. = -15V.

Note 5-13 : The definition of L/R , U/D

U/D(PIN 13)=Low L/R(PIN 14)=High

U/D(PIN 13)=High L/R(PIN 14)=Low

Note 5-14 : IF1,IF2 control the input data format.

IF2,IF1	Input data format
L,L (default)	Serial RGB
L,H	Parallel RGB
H,L	CCIR601
H,H	CCIR656

Note 5-15 : When POL=L, output voltage is negative polarity.  
When POL=H, output voltage is positive polarity.

Note 13-1 : The definitions of viewing angles

Note 13-2 :  $CR = \frac{\text{Luminance when Testing point is White}}{\text{Luminance when Testing point is Black}}$

Contrast ratio is measured in optimum common electrode voltage.

Note 13-3 : The definition of response time :

Note 13-4 : The uniformity of LCD is defined as

$$U = \frac{\text{The Minimum Brightness of the 9 testing Points}}{\text{The Maximum Brightness of the 9 testing Points}}$$

Luminance meter : BM-5A or BM-7 fast (TOPCON)

Measurement distance : 500 mm +/- 50 mm

Ambient illumination : < 1 Lux

Measuring direction : Perpendicular to the surface of module

The test pattern is white (Gray Level 63).

Note 13-5 : Topcon BM-7(fast) luminance meter 1.0° field of view is used in the testing (use PVI backlight after 5 minutes operating), ILED = 20mA.

Note 13-6 : Constant current 20mA for each loop , and the center brightness must more than 50% of initial brightness value .

## 14. Handling Cautions

### 14-1) Mounting of module

- a) Please power off the module when you connect the input/output connector.
- b) Please connect the ground pattern of the inverter circuit surely. If the connection is not perfect, some following problems may happen possibly.

### 1. The noise from the backlight unit will increase.

2. The output from inverter circuit will be unstable.
3. In some cases a part of module will heat.
- c) Polarizer which is made of soft material and susceptible to flaw must be handled carefully.
- d) Protective film (Laminator) is applied on surface to protect it against scratches and dirt. It is recommended to peel off the laminator before use and taking care of static electricity.

### 14-2) Precautions in mounting

- a) When metal part of the TFT-LCD module (shielding lid and rear case) is soiled, wipe it with soft dry cloth.
- b) Wipe off water drops or finger grease immediately. Long contact with water may cause discoloration or spots.
- c) TFT-LCD module uses glass which breaks or cracks easily if dropped or bumped on hard surface. Please handle with care.
- d) Since CMOS LSI is used in the module. So take care of static electricity and earth yourself when handling.

### 14-3) Adjusting module

- a) Adjusting volumes on the rear face of the module have been set optimally before shipment.
- b) Therefore, do not change any adjusted values. If adjusted values are changed, the specifications described may not be satisfied.

### 14-3) Others

- a) Do not expose the module to direct sunlight or intensive ultraviolet rays for many hours.
- b) Store the module at a room temperature place.
- c) The voltage of beginning electric discharge may over the normal voltage because of leakage current from approach conductor by to draw lump read lead line around.
- d) If LCD panel breaks, it is possibly that the liquid crystal escapes from the panel. Avoid putting it into eyes or mouth. When liquid crystal sticks on hands, clothes or feet. Wash it out immediately with soap.
- e) Observe all other precautionary requirements in handling general electronic components.
- f) Please adjust the voltage of common electrode as material of attachment by 1 module.

### 14-4) Polarizer mark

The polarizer mark is to describe the direction of wide view angle film how to mach up with the rubbing direction.

7	Vibration test (non-operating)	Frequency : 10 ~ 55Hz Amplitude : 1mm , sweep time : 11 mins Test period : 6 cycles for each direction of X,Y, Z
8	Shock Test(non-operating)	100G , 6ms , 3cycles for each direction of X,Y,Z
9	Electrostatic Discharge Test (non-operating)	200pF, 0Ω Machine mode = ±200V 1 time / each terminal

Ta: ambient temperature

Note : The protective film must be removed before temperature test.

[Criteria]

1. Main LCD should normally work under the normally condition no defect of function,screen quality and appearance (including : mura ,line defect ,no image)
2. After the vibration and shock test , can't be found chip broken..
