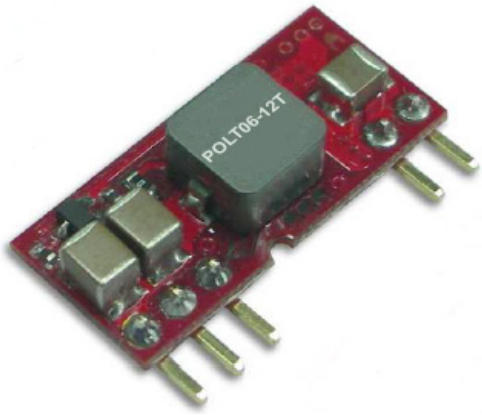
SMD Package

Size: 0.80in x 0.45in x 0.25in

SIP Vertical Package



Size: 0.90in x 0.40in x 0.23in

SIP Horizontal Package

Size: 0.90in x 0.40in x 0.40in

OPTIONS

- SMD or SIP Package Type Available
- Vertical or Horizontal Mounting for SIP Package
- Remote Control Positive or Negative Logic

FEATURES

- SMD and SIP packages available
- High Efficiency of 89%
- Small Size and Low Profile
- SMD Package qualifies for Leadfree Reflow Solder Process According to IPC J-STD-020D
- Delivers up to 6A of Output Current
- Fixed Switching Frequency
- Output Voltage Programmable from 0.75VDC to 5VDC via External Resistor
- No Minimum Load Required
- CE Marked
- RoHS II & REACH
- Over Load, Over Temperature, and Short Circuit Protection
- Remote ON/OFF
- UL60950-1, EN60950-1, & IEC60950-1 Safety Approvals

APPLICATIONS

- Wireless Network
- Telecom/Datacom
- Industry Control System
- Distributed Power Architectures
- Semiconductor Equipment
- Microprocessor Power Applications

DESCRIPTION

The POL06-12T series of DC DC open frame converters offers up to 6A of output current. This series has an input voltage range of 8.3~13.2 (14)VDC and programmable output voltage via external resistor ranging from 0.75~5VDC. No minimum load is required and there is a fixed switching frequency for this series. POL06-12T has many options available including an SMD or SIP package type, vertical or horizontal mounting for SIP package, or positive or negative logic. This series has over load, over temperature, and short circuit protection, is RoHS II & REACH, and has UL60950-1, EN60950-1, & IEC60950-1 safety approvals. Please call factory for order details.

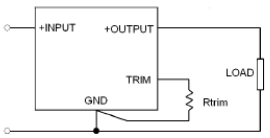
NOTES

(1) It's necessary to equip the external input capacitors at the input of the module. The capacitors should connect as close as possible to the input terminals that ensuring module stability. The external C_{in} is 2pcs of 47µF ceramic capacitors at least.

(2) Output voltage programmable from 0.7525V to 5V by connecting a single resistor (shown as Trim Table) between the Trim and GND pins of the module. To calculate the value of the resistor Rtrim for a particular output voltage Vout use the following equation:

$$Rtrim = \left[\frac{10500}{Vout - 0.7525} - 1000\right]\Omega$$

Trim Figure



Trim Table

Vout(set) (VDC)	Rtrim (kΩ)
0.7525	Open
1.2	22.46
1.5	13.05
1.8	9.024
2.5	5.009
3.3	3.122
5	1.472

(3) Test by minimum input and constant resistive load.
(4) With a 1µF MLCC & a 10µF T/C
(5) With 2pcs of 150µF polymer capacitors
(6) Remote ON/OFF Referred to –Vin pin
Positive Logic: ON/OFF is open collector/drain logic input
Negative Logic: ON/OFF pin is open collector/drain logic input with external pull-up resistor
(7) Case 1: ON/OFF input is set to logic low (module on) and then input power is applied (delay from instant at which Vin=Vin(min.) until Vout=10% of Vout(set))
(8) Case 2: Input power is applied for at least one second and then the ON/OFF input is set to logic low (delay from instant at which Von/off=0.3VDC until Vout=10% of Vout(set))

CAUTION: This power module is not internally fused. An input line fuse must always be used.

COMPANY INFORMATION

Wall Industries, Inc. has created custom and modified units for over 50 years. Our in-house research and development engineers will provide a solution that exceeds your performance requirements on-time and on budget. Our ISO9001-2008 certification is just one example of our commitment to producing a high quality, well-documented product for our customers.

Our past projects demonstrate our commitment to you, our customer. Wall Industries, Inc. has a reputation for working closely with its customers to ensure each solution meets or exceeds form, fit and function requirements. We will continue to provide ongoing support for your project above and beyond the design and production phases. Give us a call today to discuss your future projects.
