

### POWER MANAGEMENT

#### Description

The SC431 is a three terminal adjustable shunt regulator with thermal stability guaranteed over temperature. The output voltage can be adjusted to any value from 2.5V ( $V_{REF}$ ) to 30V with two external resistors. The SC431 has a typical dynamic output impedance of  $0.25\Omega$ . Active output circuitry provides a very sharp turn on characteristic, making the SC431 an excellent replacement for zener diodes.

The SC431 shunt regulator is available with four voltage tolerances (0.5%, 1.0% and 2.0% over  $T_A = -40^\circ\text{C}$  to  $+85^\circ\text{C}$  and 0.5% over  $T_A = -40^\circ\text{C}$  to  $+125^\circ\text{C}$ ) and two package options (SOT-23-3 and SO-8). This allows the designer the opportunity to select the optimum combination of cost and performance for their application.

#### Features

- ◆ Wide operating current range 130 $\mu\text{A}$  to 150mA
- ◆ Low dynamic output impedance  $0.25\ \Omega$  typ.
- ◆ Trimmed bandgap design  $\pm 0.5\%$
- ◆ Alternate for TL1431, TL431, LM431 & AS431
- ◆ Industrial temperature range
- ◆ Available in SOT-23-3 and SO-8 packages.  
Also available in Lead-free, fully WEEE and RoHS compliant.

#### Applications

- ◆ Linear Regulators
- ◆ Adjustable Supplies
- ◆ Switching Power Supplies
- ◆ Battery Operated Computers
- ◆ Instrumentation
- ◆ Computer Disk Drives

#### Typical Application Circuit<sup>(1)(2)</sup>

#### Notes:

- 1) Set  $V_{OUT}$  according to the following equation:

$$V_{OUT} = V_{REF} \left( 1 + \frac{R1}{R2} \right) + I_{REF} R1$$

- 2) Choose the value for R as follows:

- The maximum limit for R should be such that the cathode current,  $I_z$ , is greater than the minimum operating current (130 $\mu\text{A}$ ) at  $V_{IN(MIN)}$ .
- The minimum limit for R should be such that  $I_z$  does not exceed 150mA under all load conditions, and the instantaneous turn-on value for  $I_z$  does not exceed 200mA. Both of the following conditions must be met:

$$R_{min} \geq \frac{V_{IN(max)}}{200mA} \quad (\text{to limit instantaneous turn-on } I_z)$$

$$R_{min} \geq \frac{V_{IN(max)} - V_{OUT}}{I_{OUT(min)} + 150mA} \quad (\text{to limit } I_z \text{ under normal operating conditions})$$

**POWER MANAGEMENT**
**Absolute Maximum Ratings**

Exceeding the specifications below may result in permanent damage to the device, or device malfunction. Operation outside of the parameters specified in the Electrical Characteristics section is not implied.

Parameter	Symbol	Maximum	Units
Cathode Voltage	$V_Z$	31	V
Continuous Cathode Current	$I_Z$	150	mA
Reference Input Current	$I_{REF}$	10	mA
