

General Description

The SDC2921 is a Pulse–Width Modulation (PWM) control circuit with complete protection circuits for the SMPS (Switching Mode Power Supply). It contains various functions, can minimize external components of switching power supply systems in personal computer.

Features

- Complete PWM control and protection circuits
- Over voltage protection for 3.3V/ 5V/ 12V/ PT
- Under voltage protection for 3.3V/ 5V/ 12V
- 280ms PG time delay
- Open drain power good output
- 280ms time delay for UVP
- Remote ON/OFF function
- Built-in soft-start function
- Package: DIP-16

Applications

- PC power supply

Figure 1. Package Type

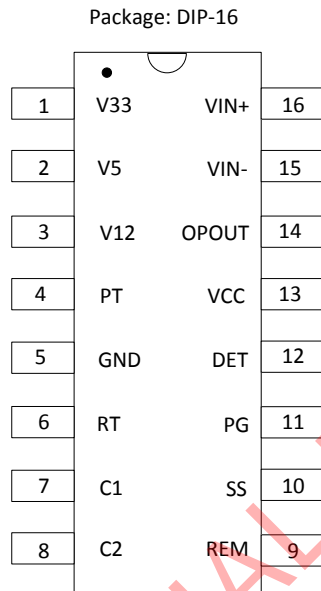

Pin Configuration

Figure 2. Pin Configuration

Pin Number	Pin Name	Function
1	V33	OVP/UVI input for 3.3V
2	V5	OVP/UVI input for 5V
3	V12	OVP/UVI input for 12V
4	PT	Extra OVP protection input
5	GND	Ground
6	RT	Oscillation frequency set by external resistor
7	C1	PWM open drain output 1
8	C2	PWM open drain output 2
9	REM	Remote on/off input
10	SS	Soft start function set by external capacitor
11	PG	Power good signal
12	DET	Extra protection input
13	VCC	Supply voltage
14	OPOUT	OP output
15	VIN-	OP negative input
16	VIN+	OP positive input

Under Voltage Protection Delay Time

Figure 6. Delay Time

Pulse Width Modulation Block

The output pulse width modulation is generated by comparison of the sawtooth waveform from the capacitor CT to the feedback of the voltage. Therefore, an increase in feedback control signal amplitude cause a linear

decrease of the output pulse width. Also, the SS(Soft-Start) limits the output pulse width. The timing diagram is shown as below:

Figure 7. PWM Block

The function of PT

This signal is prepared for extra OVP/OPP ($V_{PT} > 1.25V$) or disable under voltage protection function ($V_{PT} < 0.62V$)

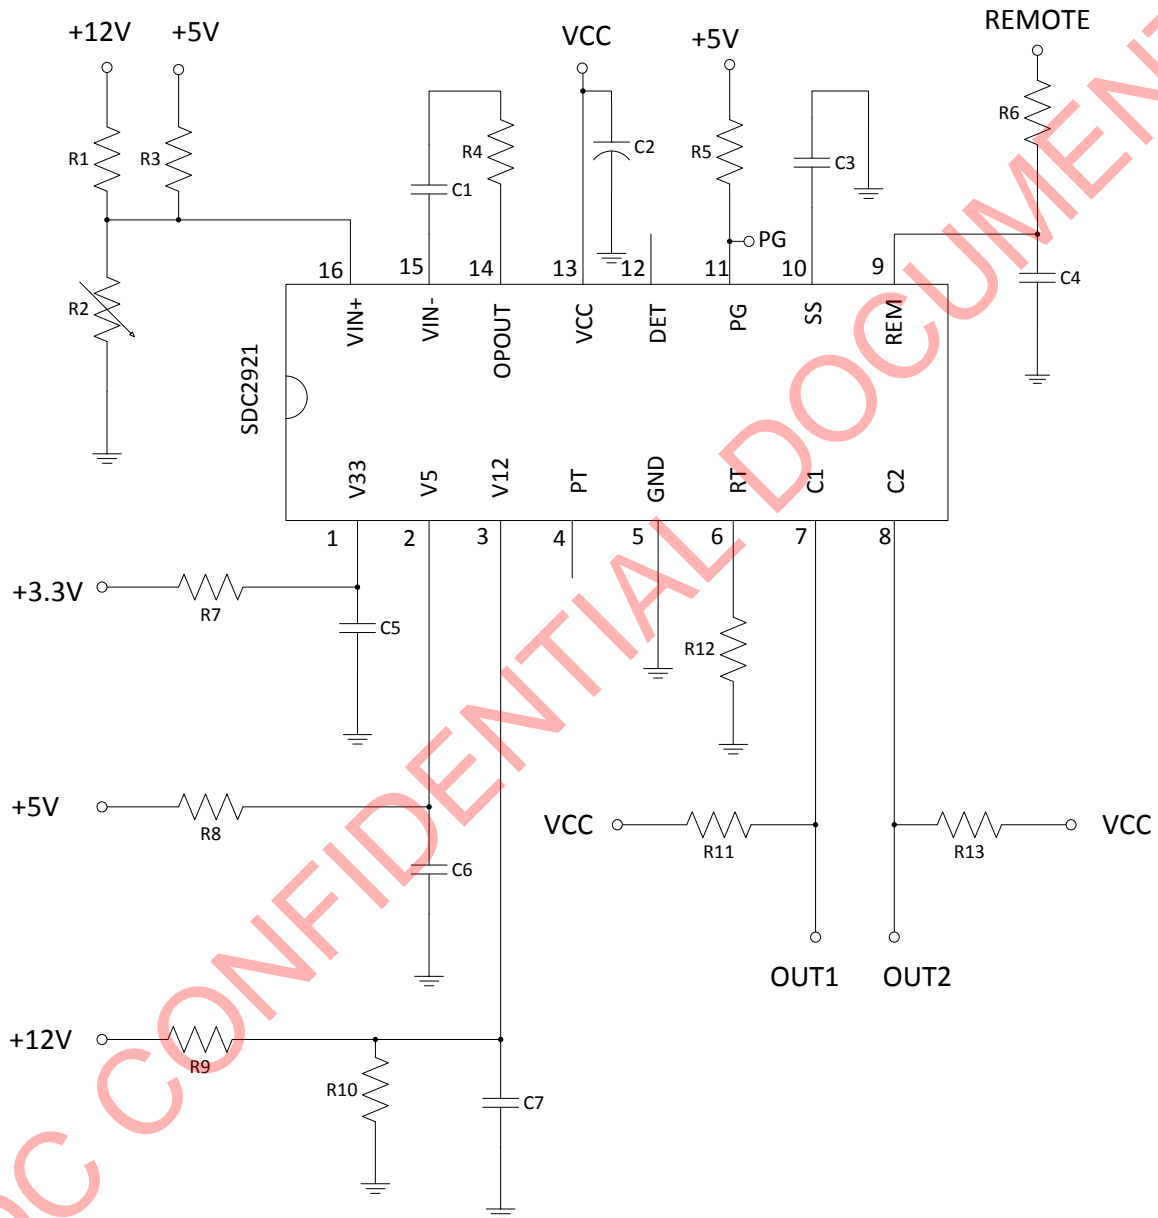

Typical Application

Figure 8. Typical Application

In some application power systems, adding an external resistor (R6) could reduce the peak value spike from the environments to pin 9 (REM) and avoid pin 9 (REM) damaged by the external noise.
