

Product Description

Stanford Microdevices' SNA-186 is a GaAs monolithic broadband amplifier (MMIC) housed in a low-cost surface-mountable plastic package. This amplifier provides 12dB of gain and +13dBm of P1dB power when biased at 4V and 50mA.

The use of an external resistor allows for bias flexibility and stability. These unconditionally stable amplifiers are designed for use as general purpose 50 ohm gain blocks.

Also available in chip form (SNA-100), its small size (0.33mm x 0.33mm) and gold metallization makes it an ideal choice for use in hybrid circuits.

The SNA-186 is available in tape and reel at 1000, 3000 and 5000 devices per reel.
