

**2.5A**

---

**DESCRIPTION**

The ST2304 is the N-Channel logic enhancement mode power field effect transistor are produced using high cell density, DMOS trench technology.

This high density process is especially tailored to minimize on-state resistance.

These devices are particularly suited for low voltage application such as cellular phone and notebook computer power management and other batter powered circuits, and low in-line power loss are needed in a very small outline surface mount package.

**PIN CONFIGURATION  
SOT-23-3L**

1.Gate    2.Source    3.Drain

**FEATURE**

- 30V/2.5A,  $R_{DS(ON)} = 70\text{m-ohm}$   
@VGS = 10V
- 30V/2.0A,  $R_{DS(ON)} = 105\text{m-ohm}$   
@VGS = 4.5V
- Super high density cell design for extremely low  $R_{DS(ON)}$
- Exceptional on-resistance and maximum DC current capability
- SOT-23-3L package design
