

**MICROCHIP**

# TC4467/TC4468/TC4469

## Logic-Input CMOS Quad Drivers

### Features

- High Peak Output Current: 1.2 A
- Wide Operating Range:
  - 4.5 V to 18 V
- Symmetrical Rise/Fall Times: 25 nsec
- Short, Equal Delay Times: 75 nsec
- Latch-proof. Will Withstand 500 mA Inductive Kickback
- 3 Input Logic Choices:
  - AND / NAND / AND + Inv
- ESD Protection on All Pins: 2 kV

### Applications

- General Purpose CMOS Logic Buffer
- Driving All Four MOSFETs in an H-Bridge
- Direct Small Motor Driver
- Relay or Peripheral Drivers
- CCD Driver
- Pin-Switching Network Driver

### General Description

The TC4467/TC4468/TC4469 devices are a family of four-output CMOS buffers/MOSFET drivers with 1.2 A peak drive capability. Unlike other MOSFET drivers, these devices have two inputs for each output. The inputs are configured as logic gates: NAND (TC4467), AND (TC4468) and AND/INV (TC4469).

The TC4467/TC4468/TC4469 drivers can continuously source up to 250 mA into ground referenced loads. These devices are ideal for direct driving low current motors or driving MOSFETs in a H-bridge configuration for higher current motor drive (see Section 5.0 for details). Having the logic gates onboard the driver can help to reduce component count in many designs.

The TC4467/TC4468/TC4469 devices are very robust and highly latch-up resistant. They can tolerate up to 5 V of noise spiking on the ground line and can handle up to 0.5 A of reverse current on the driver outputs.

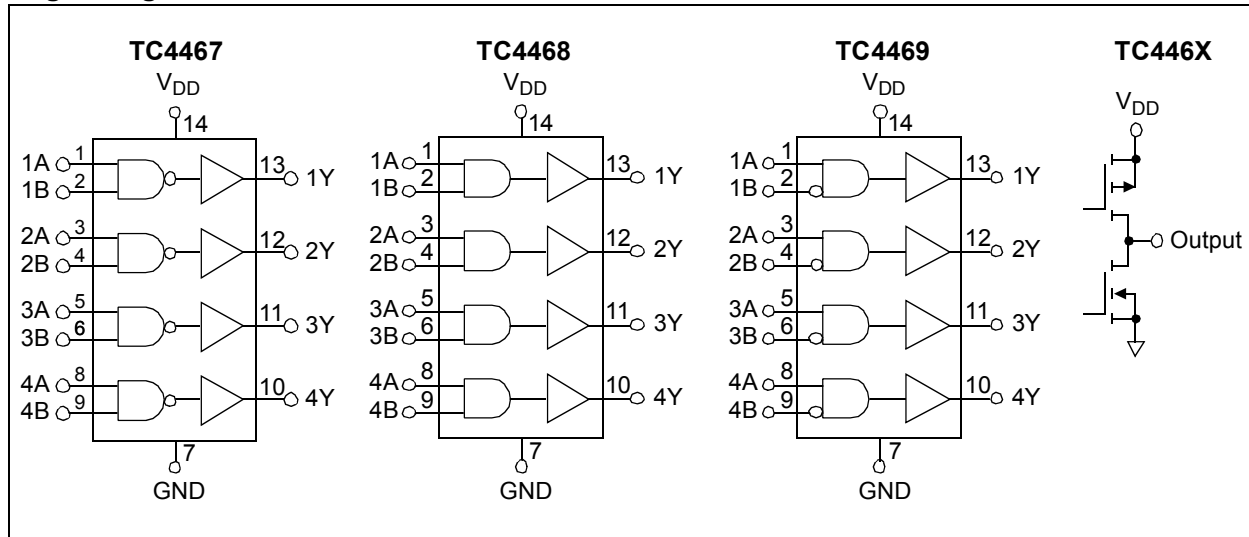

The TC4467/4468/4469 devices are available in commercial, industrial and military temperature ranges.

## 1.0 ELECTRICAL CHARACTERISTICS

### Absolute Maximum Ratings†

Supply Voltage .....	+20 V
Input Voltage .....	(GND – 5 V) to ( $V_{DD} + 0.3$ V)
Package Power Dissipation: ( $T_A \leq 70^\circ\text{C}$ )	
PDIP .....	800 mW
CERDIP .....	840 mW
SOIC .....	760 mW
Package Thermal Resistance:	
CERDIP $R_{\theta J-A}$ .....	100°C/W
CERDIP $R_{\theta J-C}$ .....	23°C/W
PDIP $R_{\theta J-A}$ .....	80°C/W
PDIP $R_{\theta J-C}$ .....	35°C/W
SOIC $R_{\theta J-A}$ .....	95°C/W
SOIC $R_{\theta J-C}$ .....	28°C/W
Operating Temperature Range:	
C Version .....	0°C to +70°C
E Version .....	-40°C to +85°C
M Version .....	-55°C to +125°C
Maximum Chip Temperature .....	+150°C
Storage Temperature Range .....	-65°C to +150°C

†**Notice:** Stresses above those listed under "Maximum Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at those or any other conditions above those indicated in the operation listings of this specification is not implied. Exposure to maximum rating conditions for extended periods may affect device reliability.

## ELECTRICAL SPECIFICATIONS

Electrical Characteristics: Unless otherwise noted, $T_A = +25^\circ\text{C}$ , with $4.5\text{ V} \leq V_{DD} \leq 18\text{ V}$ .						
Parameters	Sym	Min	Typ	Max	Units	Conditions
<b>Input</b>

Output Resistance	$R_O$	—	10	15	$\Omega$	$I_{OUT} = 10\ \text{mA}$ , $V_{DD} = 18\text{ V}$
Peak Output Current	$I_{PK}$	—	1.2	—	A	
Continuous Output Current	$I_{DC}$	—	—	300	mA	Single Output
		—	—	500		Total Package
Latch-Up Protection Withstand Reverse Current	I	—	500	—	mA	$4.5\text{ V} \leq V_{DD} \leq 16\text{ V}$
<b>Switching Time (Note 1)</b>						
Rise Time	$t_R$	—	15	25	nsec	Figure 4-1
Fall Time	$t_F$	—	15	25	nsec	Figure 4-1
Delay Time	$t_{D1}$	—	40	75	nsec	Figure 4-1
Delay Time	$t_{D2}$	—	40	75	nsec	Figure 4-1
<b>Power Supply</b>						
Power Supply Current	$I_S$	—	1.5	4	mA	<b>Note 2</b>
Power Supply Voltage	$V_{DD}$	4.5	—	18	V	

- Note 1:** Totem pole outputs should not be paralleled because the propagation delay differences from one to the other could cause one driver to drive high a few nanoseconds before another. The resulting current spike, although short, may decrease the life of the device. Switching times are ensured by design.
- Note 2:** When driving all four outputs simultaneously in the same direction,  $V_{DD}$  will be limited to 16 V. This reduces the chance that internal dv/dt will cause high-power dissipation in the device.
- Note 3:** The input threshold has approximately 50 mV of hysteresis centered at approximately 1.5 V. Input rise times should be kept below 5  $\mu\text{sec}$  to avoid high internal peak currents during input transitions. Static input levels should also be maintained above the maximum, or below the minimum, input levels specified in the "Electrical Characteristics" to avoid increased power dissipation in the device.

—	V <sub>DD</sub>	Supply Input, 4.5 V to 18 V

## 4.0 DETAILED DESCRIPTION

### 4.1 Supply Bypassing

Large currents are required to charge and discharge large capacitive loads quickly. For example, charging a 1000 pF load to 18 V in 25 nsec requires 0.72 A from the device's power supply.

To ensure low supply impedance over a wide frequency range, a 1  $\mu$ F film capacitor in parallel with one or two low-inductance, 0.1  $\mu$ F ceramic disk capacitors with short lead lengths (<0.5 in.) normally provide adequate bypassing.

### 4.2 Grounding

The TC4467 and TC4469 contain inverting drivers. Potential drops developed in common ground impedances from input to output will appear as negative feedback and degrade switching speed characteristics. Instead, individual ground returns for input and output circuits, or a ground plane, should be used.

### 4.3 Input Stage

The input voltage level changes the no-load or quiescent supply current. The N-channel MOSFET input stage transistor drives a 2.5 mA current source load. With logic "0" outputs, maximum quiescent supply current is 4 mA. Logic "1" output level signals reduce quiescent current to 1.4 mA, maximum. Unused driver inputs must be connected to  $V_{DD}$  or  $V_{SS}$ . Minimum power dissipation occurs for logic "1" outputs.

The drivers are designed with 50 mV of hysteresis, which provides clean transitions and minimizes output stage current spiking when changing states. Input voltage thresholds are approximately 1.5 V, making any voltage greater than 1.5 V, up to  $V_{DD}$ , a logic "1" input. Input current is less than 1  $\mu$ A over this range.

### 4.4 Power Dissipation

The supply current versus frequency and supply current versus capacitive load characteristic curves will aid in determining power dissipation calculations. Microchip Technology's CMOS drivers have greatly reduced quiescent DC power consumption.

Input signal duty cycle, power supply voltage and load type influence package power dissipation. Given power dissipation and package thermal resistance, the maximum ambient operating temperature is easily calculated. The 14-pin plastic package junction-to-ambient thermal resistance is 83.3°C/W. At +70°C, the package is rated at 800 mW maximum dissipation. Maximum allowable chip temperature is +150°C.

Three components make up total package power dissipation:

1. Load-caused dissipation ( $P_L$ ).
2. Quiescent power ( $P_Q$ ).
3. Transition power ( $P_T$ ).

A capacitive-load-caused dissipation (driving MOSFET gates), is a direct function of frequency, capacitive load and supply voltage. The power dissipation is:

#### EQUATION

$$P_L = fCV_S^2$$

$f$  = Switching Frequency  
 $C$  = Capacitive Load  
 $V_S$  = Supply Voltage

A resistive-load-caused dissipation for ground-referenced loads is a function of duty cycle, load current and load voltage. The power dissipation is:

#### EQUATION

$$P_L = D(V_S - V_L)I_L$$

$D$  = Duty Cycle  
 $V_S$  = Supply Voltage  
 $V_L$  = Load Voltage  
 $I_L$  = Load Current

# TC4467/TC4468/TC4469

A resistive-load-caused dissipation for supply-referenced loads is a function of duty cycle, load current and output voltage. The power dissipation is

## EQUATION

$$P_L = DV_O I_L$$

$D$  = Duty Cycle  
 $V_O$  = Device Output Voltage  
 $I_L$  = Load Current

Quiescent power dissipation depends on input signal duty cycle. Logic HIGH outputs result in a lower power dissipation mode, with only 0.6 mA total current drain (all devices driven). Logic LOW outputs raise the current to 4 mA maximum. The quiescent power dissipation is:

## EQUATION

$$P_Q = V_S(D(I_H) + (1 - D)I_L)$$

$I_H$  = Quiescent Current with all outputs LOW  
 (4 mA max.)  
 $I_L$  = Quiescent Current with all outputs HIGH  
 (0.6 mA max.)  
 $D$  = Duty Cycle  
 $V_S$  = Supply Voltage

Transition power dissipation arises in the complimentary configuration (TC446X) because the output stage N-channel and P-channel MOS transistors are ON simultaneously for a very short period when the output changes. The transition power dissipation is approximately:

## EQUATION

$$P_T = fV_S(10 \times 10^{-9})$$

$C = 1000 \text{ pF}$  Capacitive Load  
 $V_S = 15 \text{ V}$   
 $D = 50\%$   
 $f = 200 \text{ kHz}$   
 $P_D = \text{Package Power Dissipation}$   
 $= P_L + P_Q + P_T$   
 $= 45 \text{ mW} + 35 \text{ mW} + 30 \text{ mW}$   
 $= 110 \text{ mW}$

Package power dissipation is the sum of load, quiescent and transition power dissipations. An example shows the relative magnitude for each term:

Maximum operating temperature is:

## EQUATION

$$T_J - \theta_{JA}(P_D) = 141^\circ\text{C}$$

$T_J$  = Maximum allowable junction temperature  
 (+150°C)  
 $\theta_{JA}$  = Junction-to-ambient thermal resistance  
 (83.3°C/W) 14-pin plastic package

**Note:** Ambient operating temperature should not exceed +85°C for "EJD" device or +125°C for "MJD" device.

## 6.0 PACKAGING INFORMATION

### 6.1 Package Marking Information

14-Lead PDIP (300 mil)

Example:

14-Lead CERDIP (300 mil)

Example:

16-Lead SOIC (300 mil)

Example:

<b>Legend:</b>	XX...X	Customer specific information*
	YY	Year code (last 2 digits of calendar year)
	WW	Week code (week of January 1 is week '01')
	NNN	Alphanumeric traceability code
<b>Note:</b>	In the event the full Microchip part number cannot be marked on one line, it will be carried over to the next line thus limiting the number of available characters for customer specific information.	

\* Standard OTP marking consists of Microchip part number, year code, week code, facility code, mask rev#, and assembly code.

NOTES:

## ON-LINE SUPPORT

Microchip provides on-line support on the Microchip World Wide Web (WWW) site.

The web site is used by Microchip as a means to make files and information easily available to customers. To view the site, the user must have access to the Internet and a web browser, such as Netscape or Microsoft Explorer. Files are also available for FTP download from our FTP site.

### Connecting to the Microchip Internet Web Site

The Microchip web site is available by using your favorite Internet browser to attach to:

**[www.microchip.com](http://www.microchip.com)**

The file transfer site is available by using an FTP service to connect to:

**<ftp://ftp.microchip.com>**

The web site and file transfer site provide a variety of services. Users may download files for the latest Development Tools, Data Sheets, Application Notes, User's Guides, Articles and Sample Programs. A variety of Microchip specific business information is also available, including listings of Microchip sales offices, distributors and factory representatives. Other data available for consideration is:

- Latest Microchip Press Releases
- Technical Support Section with Frequently Asked Questions
- Design Tips
- Device Errata
- Job Postings
- Microchip Consultant Program Member Listing
- Links to other useful web sites related to Microchip Products
- Conferences for products, Development Systems, technical information and more
- Listing of seminars and events

## Systems Information and Upgrade Hot Line

The Systems Information and Upgrade Line provides system users a listing of the latest versions of all of Microchip's development systems software products. Plus, this line provides information on how customers can receive any currently available upgrade kits. The Hot Line Numbers are:

1-800-755-2345 for U.S. and most of Canada, and

1-480-792-7302 for the rest of the world.

## Sales and Support

### Data Sheets

Products supported by a preliminary Data Sheet may have an errata sheet describing minor operational differences and recommended workarounds. To determine if an errata sheet exists for a particular device, please contact one of the following:

1. Your local Microchip sales office
2. The Microchip Corporate Literature Center U.S. FAX: (480) 792-7277
3. The Microchip Worldwide Site ([www.microchip.com](http://www.microchip.com))

Please specify which device, revision of silicon and Data Sheet (include Literature #) you are using.

### New Customer Notification System

Register on our web site ([www.microchip.com/cn](http://www.microchip.com/cn)) to receive the most current information on our products.

NOTES:

Information contained in this publication regarding device applications and the like is intended through suggestion only and may be superseded by updates. It is your responsibility to ensure that your application meets with your specifications. No representation or warranty is given and no liability is assumed by Microchip Technology Incorporated with respect to the accuracy or use of such information, or infringement of patents or other intellectual property rights arising from such use or otherwise. Use of Microchip's products as critical components in life support systems is not authorized except with express written approval by Microchip. No licenses are conveyed, implicitly or otherwise, under any intellectual property rights.

## Trademarks

The Microchip name and logo, the Microchip logo, FilterLab, KEELOQ, microID, MPLAB, MXDEV, PIC, PICmicro, PICMASTER, PICSTART, PRO MATE, SEEVAL and The Embedded Control Solutions Company are registered trademarks of Microchip Technology Incorporated in the U.S.A. and other countries.

dsPIC, dsPICDEM.net, ECONOMONITOR, FanSense, FlexROM, fuzzyLAB, In-Circuit Serial Programming, ICSP, ICEPIC, microPort, Migratable Memory, MPASM, MPLIB, MPLINK, MPSIM, MXLAB, PICC, PICDEM, PICDEM.net, rfPIC, Select Mode and Total Endurance are trademarks of Microchip Technology Incorporated in the U.S.A.

Serialized Quick Turn Programming (SQTP) is a service mark of Microchip Technology Incorporated in the U.S.A.

All other trademarks mentioned herein are property of their respective companies.
