

## 3 band car audio processor

### Features

- Input multiplexer
  - Multiple input configuration for different application
- Loudness
  - 2nd order frequency response
  - Programmable center frequency
  - 15dB with 1dB steps
  - Selectable high frequency boost
  - Selectable flat-mode
- Volume
  - +15dB to -15dB with 1dB step resolution
  - Soft-step control with programmable blend times
- Bass
  - 2nd order frequency response
  - Center frequency programmable in 4 steps
  - Q programmable 1.0/1.25/1.5/2.0
  - DC gain programmable
  - -15 to 15dB range with 1dB resolution
- Middle
  - 2nd order frequency response
  - Center frequency programmable in 4 steps
  - Q programmable 0.5/0.75/1.0/1.25
  - -15 to 15dB range with 1dB resolution
- Treble
  - 2nd order frequency response
  - Center frequency programmable in 4 steps
  - -15 to 15dB range with 1dB resolution
- Speaker
  - 4 independent soft step speaker controls
  - 0dB to -79dB with 1dB steps
  - Direct mute
- Subwoofer
  - 2nd order low pass filter with programmable cut off frequency
  - 2 independent soft step level control,

- Mute functions
  - Direct mute
  - Digitally controlled SoftMute with 4 programmable mute-times
- Offset detection
  - Offset voltage detection circuit for on-board power amplifier failure diagnosis
- Level meter
  - Provide rectified level voltage of main source signal (before loudness)
- Rear seat selector
  - Full source selector for rear seat output
- Mixing selector

### Description

The TDA7719 is a high performance signal processor specifically designed for car radio applications. The device includes a high performance audioprocessor with fully integrated audio filters and new Soft Step architecture. The digital control allows programming in a wide range of filter characteristics. By the use of BCMOS-process and liner signal processing low distortion and low noise are obtained.

**Table 1. Device summary**

Order code	Package	Packing
TDA7719	TSSOP28	Tube
TDA7719TR	TSSOP28	Tape and reel

## 3 Electrical specifications and characteristics

### 3.1 Thermal data

Table 3. Thermal data

Symbol	Description	Value	Unit
$R_{th-j\ amb}$	Thermal resistance junction to ambient	114	°C/W

### 3.2 Absolute maximum ratings

Table 4. Absolute maximum ratings

Symbol	Parameter	Value	Unit
$V_S$	Operating supply voltage	10.5	V
$V_{in\_max}$	Maximum voltage for signal input pins	7	V
$T_{amb}$	Operating ambient temperature	-40 to 85	°C
$T_{stg}$	Storage temperature range	-55 to 150	°C

### 3.3 Electrical characteristics

$V_S = 8.5V$ ;  $T_{amb} = 25^\circ C$ ;  $R_L = 10k\Omega$ ; all gains = 0dB;  $f = 1kHz$ ; unless otherwise specified

Table 5. Electrical characteristics

Symbol	Parameter	Test condition	Min.	Typ.	Max.	Unit
<b>Supply</b>						
$V_s$	Supply voltage		7.5	8.5	10	V
$I_s$	Supply current		25	35	45	mA
<b>Input selector</b>						
$R_{in}$	Input resistance	All single ended inputs <sup>(1)</sup>	70	100	130	k $\Omega$
$V_{CL}$	Clipping level	Input Gain = 0dB	1.8	2		$V_{RMS}$
$S_{IN}$	Input separation		80	100		dB
<b>Differential stereo inputs</b>						
$R_{in}$	Input resistance	Differential	70	100	130	k $\Omega$
CMRR1	Common mode rejection ratio for main source	$V_{CM}=1\ VRMS@\ 1kHz$	46			dB
		$V_{CM}=1\ VRMS@\ 10kHz$	46	60		dB
CMRR2	Common mode rejection ratio for 2 <sup>nd</sup> source	$V_{CM}=1\ VRMS@\ 1kHz$	46	60		dB
$e_{No}$	Output noise @ speaker outputs	20Hz-20kHz, A-weighted; all stages 0dB		12	30	$\mu V$

Table 5. Electrical characteristics (continued)

Symbol	Parameter	Test condition	Min.	Typ.	Max.	Unit
<b>Loudness control</b>						
$A_{MAX}$	Max attenuation		17	15	13	dB
$A_{STEP}$	Step resolution		0.5	1	1.5	dB
$f_{Peak}^{(2)}$	Peak frequency	$f_{P1}$	360	400	440	Hz
		$f_{P2}$	720	800	880	Hz
		$f_{P3}$	2200	2400	2600	Hz
<b>Volume control</b>						
$G_{MAX}$	Max gain		13	15	17	dB
$A_{MAX}$	Max attenuation		-17	-15	-13	dB
$A_{STEP}$	Step resolution		0.5	1	1.5	dB
$E_A$	Attenuation set error		-0.75	0	+0.75	dB
$E_T$	Tracking error				2	dB
$V_{DC}$	DC steps	Adjacent attenuation steps		0.1	3	mV
		From 0dB to $G_{MIN}$		0.5	5	mV
<b>Soft mute</b>						
$A_{MUTE}$	Mute attenuation		80	100		dB
$T_D$	Delay time	T1	0.16	0.48	0.80	ms
		T2	0.32	0.96	1.6	ms
		T3	3	8	13	ms
		T4	10	16	20	ms
$V_{TH\ Low}$	Low threshold for SM pin				0.6	V
$V_{TH\ High}$	High threshold for SM pin		2.7			V
$R_{PU}$	Internal pull-up resistor		32	45	58	k $\Omega$
$V_{PU}$	Internal pull-up Voltage		3.1	3.3	3.5	V
<b>Bass control</b>						
$F_c$	Center frequency	$f_{C1}$	54	60	66	Hz
		$f_{C2}$	72	80	88	Hz
		$f_{C3}$	90	100	110	Hz
		$f_{C4}$	180	200	220	Hz

$A_{\text{MUTE}}$	Mute attenuation		80	90		dB
$E_{\text{E}}$	Attenuation set error				2	dB

**Table 5. Electrical characteristics (continued)**

Symbol	Parameter	Test condition	Min.	Typ.	Max.	Unit
V <sub>DC</sub>	DC steps	Adjacent attenuation steps		0.1	5	mV
<b>Subwoofer lowpass</b>						
f <sub>LP</sub> <sup>(2)</sup>	Lowpass corner frequency	f <sub>LP1</sub>	72	80	88	Hz
		f <sub>LP2</sub>	108	120	132	Hz
		f <sub>LP3</sub>	144	160	176	Hz
<b>DC offset detection circuit</b>						
V <sub>th</sub>	Zero comp window size	V2	±20	±50	±80	mV
		V3	±30	±75	±110	mV
		V4	±60	±100	±140	mV
t <sub>sp</sub>	Max rejected spike length		5	11	25	µs
			10	22	50	µs
			15	33	75	µs
			20	44	100	µs
I <sub>CHDCerr</sub>	DCErr charge current		1	5	10	µA
I <sub>DISDCerr</sub>	DCErr discharge current		3.5	5	6.5	mA
V <sub>OutH</sub>	DCErr high volotage		3	3.3	3.6	V
V <sub>OutL</sub>	DCErr low voltage			100	300	mV
<b>Level meter</b>						
V <sub>out</sub>	Output voltage range		0		3.4	V
V <sub>LEVEL</sub>	Output level	V <sub>in</sub> = 1Vrms	1.2	1.6	2.0	V
		V <sub>in</sub> = AC Grounded	-0.5	0	0.5	V
T <sub>DEL</sub>	Analog output delay time			2		µs
<b>General</b>						
e <sub>NO</sub>	Output noise	BW=20Hz to 20kHz A-Weighted, all gain = 0dB		12	30	µV
		BW=20Hz - 20kHz A-Weighted, Output muted		6	25	µV
S/N	Signal to noise ratio	all gain = 0dB, A-weighted; V <sub>o</sub> = 2V <sub>RMS</sub>		104		dB
D	Distortion	V <sub>IN</sub> = 1V <sub>RMS</sub> ; all stages 0dB		0.01	0.2	%
S <sub>C</sub>	Channel separation left/right		80	90		dB

1. When DC offset detector is not used, the impedance of mono single-ended input is 50kΩ instead of 100kΩ
2. Minimun, typical and maximum are calculate in according to simulation result. Functionality is guaranteed by measuring a directly correlated parameter.

## 4 Description

### 4.1 Input stages

The input stage (Main source and 2<sup>nd</sup> source) is configurable to adapt to different application. There are 7 different configurations which provide different input structure and different number of input sources as shown below.

- 4 x QD,
- 2 x QD + 3 x SE,
- 1 x QD + 5 x SE,
- 1 x QD + 3 x SE + 2 x MD,
- 3 x QD + 1 x FD,
- 3 x QD + 2 x SE,
- 1 x QD + 2 x SE + 1 x FD + 1 x MD,
- 1 x QD + 3 x SE + 1 x FD

*Note:* QD = Quasi-Differential, SE = Single-ended input, FD = Full Differential, MD = mono Differential

The configuration of the input stage is controlled by 'Input Configuration' bits in I<sup>2</sup>C control table (Byte0 Bit5~Bit7). The table below shows the configuration of input pins in different configurations.

**Table 6. Input pin configuration**

Pin	Pin name	Configuration bits (Byte0 Bit7~Bit5)															
		"000"		"001"		"010"		"011"		"100"		"101"		"110"		"111"	
		CFG0	CFG1	CFG2	CFG3	CFG4	CFG5	CFG6	CFG7	CFG8	CFG9	CFG10	CFG11	CFG12	CFG13	CFG14	CFG15
1	QD1L_SE1L_MD3+	QD1L		SE1L	IN0	SE1L	IN0	SE1L	IN0	QD1L		QD1L		MD3+	IN7	SE1L	IN0
2	QD1R_SE1R_MD3-	QD1R	IN0	SE1R		SE1R		SE1R		QD1R	IN0	QD1R	IN0	MD3-		SE1R	
3	QD1G_SE2L	QD1G		SE2L		SE2L		SE2L		QD1G		QD1G		SE2L		SE2L	
4	QD2G_SE2R	QD2G		SE2R	IN4	SE2R	IN4	SE2R	IN4	QD2G		QD2G		SE2R	IN4	SE2R	IN4
5	QD2L_SE3L	QD2L	IN1	SE3L		SE3L	IN1	SE3L	IN1	QD2L	IN1	QD2L	IN1	SE3L	IN1	SE3L	IN1
6	QD2R_SE3R	QD2R		SE3R		SE3R		SE3R		QD2R		QD2R		SE3R		SE3R	
7	QD3L	QD3L		QD3L		QD3L		QD3L		QD3L		QD3L		QD3L		QD3L	
8	QD3G	QD3G	IN2	QD3G	IN2	QD3G	IN2	QD3G	IN2	QD3G	IN2	QD3G	IN2	QD3G	IN2	QD3G	IN2
9	QD3R	QD3R		QD3R		QD3R		QD3R		QD3R		QD3R		QD3R		QD3R	
10	QD4L_FD4+_SE4L_MD1+	QD4L		QD4L		SE4L	IN5	MD1+	IN3	FD4L+		SE4L	IN5	FD4L+		FD4L+	IN3
11	QD4G_FD4L_SE4R_MD1-	QD4G		QD4G		SE4R		MD1-		FD4L-		SE4R		FD4L-		FD4L-	
12	QD4G_FD4R_SE5L_MD2-	QD4G	IN3	QD4G	IN3	SE5L		MD2-		FD4R-		SE5L		FD4R-		FD4R-	
13	QD4R_FD4R+_SE5R_MD2+	QD4R		QD4R		SE5R	IN6	MD2+	IN3	FD4R+		SE5R	IN6	FD4R+		FD4R+	

With different input configuration, the input source can be selected with input selector (Byte0/1 Bit0~Bit2). The following matrix defines the selector configuration of different input sources dependant on the configuration bits.

**Table 7. Selector configuration matrix**

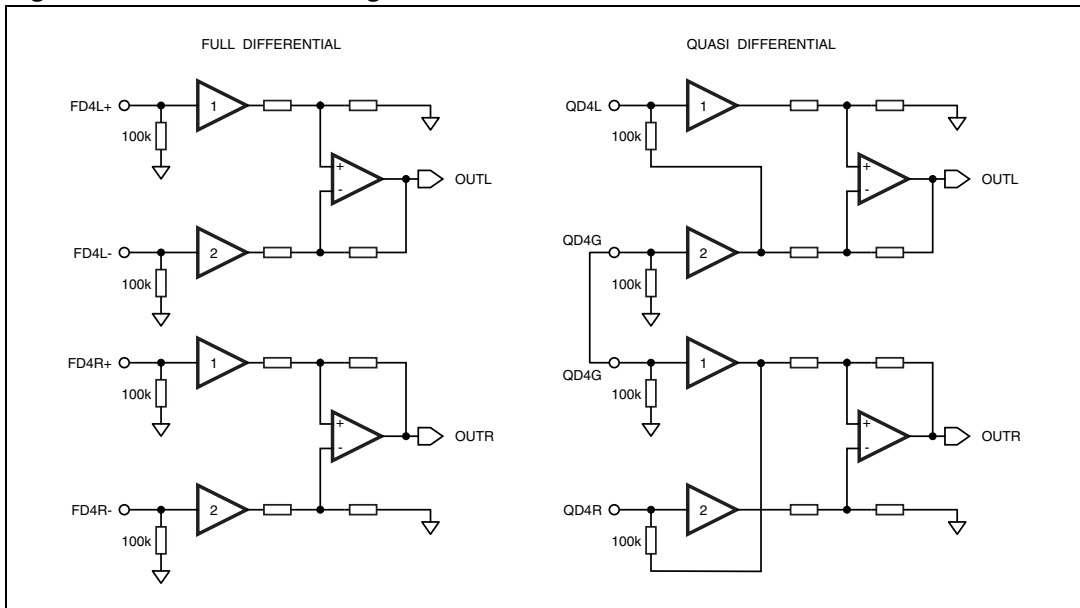

Selector Bits (Byte0/1 Bit2~Bit0)	000	001	010	011	100	101	110	111
	IN0	IN1	IN2	IN3	IN4	IN5	IN6	IN7
CFG0	QD1	QD2	QD3	QD4	NA	NA	NA	NA
CFG1	SE1	SE3	QD3	QD4	SE2	NA	NA	NA
CFG2	SE1	SE3	QD3	NA	SE2	SE4	SE5	NA
CFG3	SE1	SE3	QD3	MD1/2	SE2	NA	NA	NA
CFG4	QD1	QD2	QD3	FD	NA	NA	NA	NA
CFG5	QD1	QD2	QD3	NA	NA	SE4	SE5	NA
CFG6	NA	SE3	QD3	FD	SE2	NA	NA	MD3
CFG7	SE1	SE3	QD3	FD	SE2	NA	NA	NA

*Note:* In each configuration, only the green cells are allowed. The red cells is not allowed. MD1/MD2 selection is defined by extra bit – ‘MD1/2 selection’ in I<sup>2</sup>C control table (Bit3 of Byte0/1).

The input stage can be configured to 0dB or 3dB gain with I<sup>2</sup>C bus. The 0dB configuration allows up to 2V<sub>rms</sub> input signal level, while with 3dB gain, the internal signal will start to clip when input signal level is higher than 1.414V<sub>rms</sub>.

The Pin10~Pin13 can be configured as full differential input stage or quasi-differential input. When it is configured as quasi-differential input, both Pin11 and Pin12 are used as the QD common input pins. These two pins must be connected together externally in application. In this case the input impedance of QD4 common is reduced to 50kΩ (half of QD4 left and right input). The diagram below shows both QD and FD configuration of QD4/FD4.

**Figure 3. QD and FD configuration of QD4/FD4**

## 4.2 Mixing

The device provides mixing function which allows the mixing source mixed into front and rear speaker output independently. The mixing source can be any single-ended input, mono-differential input or beep input (Mono single-ended input when DC offset detector is not used). In order to adjust the level of mixing signal, the mixing selector is followed with a 0dB~-31dB attenuator. The maximum mixing input signal level is 1.6Vrms for single-ended input and mono-differential input. For beep input, the maximum input signal level is about 1.4Vrms. The block diagram of the mixing function is shown below.

**Figure 4. Block diagram of mixing stage**

Since the input stage of this device has different configurations, the corresponding sources for mixing selector are also different according to the configurations. The following table defines the available sources for mixing under different configurations.

**Table 8. Available sources for mixing**

Mix selector bits (Byte2 Bit2~Bit0)	000	001	010	011	100	101	110	111
	MixIN0	MixIN1	MixIN2	MixIN3	MixIN4	MixIN5	MixIN6	MixIN7
CFG0	NA	NA	NA	NA	NA	NA	Beep	Mute
CFG1	SE1	SE2	SE3	NA	NA	NA	Beep	Mute
CFG2	SE1	SE2	SE3	SE4	SE5	NA	Beep	Mute
CFG3	SE1	SE2	SE3	MD1	NA	MD2	Beep	Mute
CFG4	NA	NA	NA	NA	NA	NA	Beep	Mute
CFG5	NA	NA	NA	SE4	SE5	NA	Beep	Mute
CFG6	MD3	SE2	SE3	NA	NA	NA	Beep	Mute
CFG7	SE1	SE2	SE3	NA	NA	NA	Beep	Mute

*Note: Only green cells are allowed mixing input. The red cells are not allowed. The beep input is available only when DC offset detector function is not used.*

### 4.3 Loudness

There are four parameters programmable in the loudness stage:

#### 4.3.1 Loudness attenuation

*Figure 5* shows the attenuation as a function of frequency at  $f_p = 400\text{Hz}$

**Figure 5. Loudness attenuation @  $f_p = 400\text{Hz}$ .**

### 4.3.2 Peak frequency

Figure 6 shows the four possible peak-frequencies at 400, 800 and 2400Hz

Figure 6. Loudness center frequencies @ Attn. = 15dB.

### 4.3.3 High frequency boost

Figure 7 shows the different Loudness shapes in low & high frequency boost.

Figure 7. Loudness attenuation, fc=2.4kHz

#### 4.3.4 Flat mode

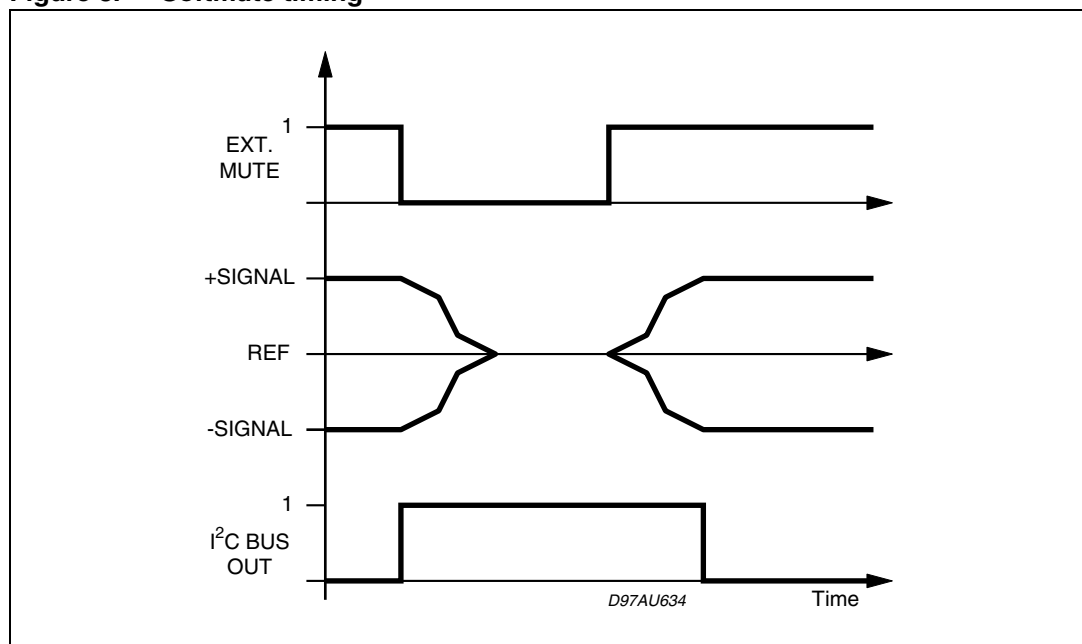

In flat mode the loudness stage works as a 0dB to -15dB attenuator.

### 4.4 SoftMute

The digitally controlled SoftMute stage allows muting/demuting the signal with a I<sup>2</sup>C-bus programmable slope. The mute process can either be activated by the SoftMute pin or by the I<sup>2</sup>C-bus. This slope is realized in a special S-shaped curve to mute slow in the critical regions (see [Figure 8](#)).

For timing purposes the Bit0 of the I<sup>2</sup>C-bus output register is set to 1 from the start of muting until the end of demuting.

**Figure 8. Softmute timing**

*Note:* A started Mute action is always terminated and could not be interrupted by a change of the mute signal

#### 4.5 SoftStep volume

When the volume-level is changed audible clicks could appear at the output. The root cause of those clicks could either be a DC Offset before the volume-stage or the sudden change of the envelope of the audio signal. With the SoftStep feature both kinds of clicks could be reduced to a minimum and are no more audible. The blend-time from one step to the next is programmable as 5ms or 10ms. The softstep control is described in detail in [Chapter 4.10](#).

#### 4.6 Bass

There are four parameters programmable in the bass stage:

### 4.6.1 Bass attenuation

Figure 9 shows the attenuation as a function of frequency at a center frequency of 80Hz.

Figure 9. Bass Control @  $f_c = 80\text{Hz}$ ,  $Q = 1$

### 4.6.2 Bass center frequency

Figure 10 shows the four possible center frequencies 60, 80, 100 and 200Hz.

Figure 10. Bass center frequencies @ gain = 14dB,  $Q = 1$

### 4.6.3 Bass quality factors

Figure 11 shows the four possible quality factors 1, 1.25, 1.5 and 2.

Figure 11. Bass quality factors @ gain = 14dB, fC = 80Hz

### 4.6.4 DC mode

In this mode the DC gain is increased by 4.4dB. In addition the programmed center frequency and quality factor is decreased by 25% which can be used to reach alternative center frequencies or quality factors.

Figure 12. Bass normal and DC mode @ Gain = 14dB, fc = 80Hz

The center frequency, Q and DC-mode can be set fully independently.

## 4.7 Middle

There are three parameters programmable in the middle stage:

### 4.7.1 Middle attenuation

*Figure 13* shows the attenuation as a function of frequency at a center frequency of 1kHz.

**Figure 13. Middle control @  $f_C = 1$  kHz,  $Q = 1$**

### 4.7.2 Middle center frequency

*Figure 14* shows the four possible center frequencies 500Hz, 1kHz, 1.5kHz and 2.5kHz.

**Figure 14. Middle center frequencies @ gain = 14dB,  $Q = 1$**

### 4.7.3 Middle quality factors

Figure 15 shows the four possible quality factors 0.5, 0.75, 1 and 1.25.

Figure 15. Middle quality factors @ gain = 14dB,  $f_c = 1\text{kHz}$

## 4.8 Treble

There are two parameters programmable in the treble stage:

### 4.8.1 Treble attenuation

Figure 16 shows the attenuation as a function of frequency at a center frequency of 17.5kHz

Figure 16. Treble Control @  $f_c = 17.5\text{kHz}$ .

### 4.8.2 Treble center frequency

Figure 17 shows the four possible center frequencies 10k, 12.5k, 15k and 17.5kHz.

Figure 17. Treble center frequencies @ gain = 14dB

### 4.9 Subwoofer Filter

The subwoofer lowpass filter has Butterworth characteristics with programmable cut-off frequency (80 / 120 / 160Hz). The output phase can be selected between 0deg and 180deg. The input of subwoofer takes signal from bass filter output or output of input mux.

Figure 18. Subwoofer control

## 4.10 Softstep control

In this device, the softstep function is available for volume, speaker, loudness, treble, middle and bass block. With softstep function, the audible noise of DC offset or the sudden change of signal can be avoided when adjusting gain setting of the block.

For each block, the softstep function is controlled by softstep on/off control bit in the control table. The softstep transient time selection (5ms or 10ms) is common for all blocks and it is controlled by softstep time control bit. The softstep operation of all blocks has a common centralized control. In this case, a new softstep operation can not be started before the completion previous softstep.

There are two different modes to activate the softstep operation. The softstep operation can be started right after I<sup>2</sup>C data sending, or the softstep can be activated in parallel after data sending of several different blocks. The two modes are controlled by the 'act bit' (it is normally bit7 of the byte.) of each byte. When act bit is '0', which means action, the softstep is activated right after the data byte is sent. When the act bit is '1', which means wait, the block goes to wait for softstep status. In this case, the block will wait for some other block to activate the operation. The softstep operation of all blocks in wait status will be done together with the block which activate the softstep. With this mode, all specific blocks can do the softstep in parallel. This avoids waiting when the softstep is operated one by one.

Chip Addr	Sub Addr	0xxxxxxx
-----------	----------	----------

↑ Softstep start here

Chip Addr	Sub Addr	1xxxxxxx	1xxxxxxx	.....	0xxxxxxx
-----------	----------	----------	----------	-------	----------

↑ Softstep start here for all

1. It is not allowed to cross 0dB with softstep directly. From plus gain to minus gain, it must go to +0dB first, then destination. From minus gain to plus gain, it must go to -0dB first, and then destination.
2. When one block is in 'wait for softstep' status, it is not allowed to send data to this block again before its softstep is completed.
3. To know if there is a softstep in operation, it is possible to monitor the 'busy' signal by I<sup>2</sup>C transmission mode ([Section 5.1.2](#)). When softstep is busy (busy=0), it is better to wait before sending new data until it is free (busy=1).

## 4.11 DC offset detector and level meter option

This device provide DC offset detector function and level meter function option. In one specific application, only one of the function can be used. The configuration of the function is controlled by I<sup>2</sup>C bus (Byte3 Bit7).

When the device uses DC offset detector function, Pin22, Pin27 and Pin28 are used as WinTC, DCErr and WinIN for DC offset detector. When it is configured as level meter, DCErr becomes level meter output. In the mean time, WinIN is used as beep input (Mono single-ended input for mixing), and WinTC becomes a reference voltage output (4V external DC voltage or 3.3V internal reference voltage).

**Caution:** DC offset detector and level meter / Vref output / Beep / (mono single sided input) can not be used at the same time.

## 4.12 DC offset detector

Using the DC offset detection circuit ([Figure 19](#)) an offset voltage difference between the audio power amplifier and the APR's Front and Rear outputs can be detected, preventing serious damage to the loudspeakers. The circuit compares whether the signal crosses the zero level inside the audio power at the same time as in the speaker cell. The output of the zero-window-comparator of the power amplifier must be connected with the WinIn-input of the APR. The WinIn-input has an internal pull-up resistor connected to 5.5Volts. It is recommended to drive this pin with open-collector outputs only.

To compensate for errors at low frequencies the WinTC-pin are implemented, with external capacitors introducing the same delay  $\tau = 7.5k\Omega * C_{ext}$  as the AC-coupling between the APR and the power amplifier introduces. For the zero window comparators, the time constant for spike rejection as well as the threshold are programmable.

For electrical characteristics see [Chapter 3 on page 9](#).

A low-active DC-offset error signal appears at the DCErr output if the next conditions are both true:

- a) Front and rear outputs are inside zero crossing windows.
- b) The Input voltage VWinIn is logic low whenever at least one output of the power amplifier is outside the zero crossing windows.

After power-on, the external attached capacitor is rapidly charged (fast-charge) to overcome a false indication.

Figure 19. DC offset detection circuit (simplified)

### 4.13 Level meter

In case of not using DC offset detector, the three pins used for this function can be configured as other functions. Pin27 (DC\_Err / LMOUT) then becomes the level meter output. The level meter block takes signal after main input selector and mix signal into mono, then rectify the signal and detect the peak of the signal. The output stage of level meter removes the DC voltage of the signal and the output voltage level shows exactly the  $V_{peak}$  of signal. Since the discharge time constant of the level meter is quite slow, it is necessary to reset level meter regularly (with I<sup>2</sup>C bus control Byte3 Bit6) to get correct peak information of the signal.

### 4.14 Output gain control

The output stage of the device can provide a option to have additional 1dB gain in order to boost the maximum output level to 2.2V<sub>rms</sub> with maximum 1% distortion.

### 4.15 Audioprocessor testing

In the test mode, which can be activated by setting bit D7 of the I<sup>2</sup>C subaddress byte and bit D0 of the testing-audioprocessor byte, several internal signals are available at the QD1L pin. In this mode, the input resistance of 100kOhm is disconnected from the pin. Internal signals available for testing are listed in the data-byte specification.

### 4.16 Test circuit (3 x QD + 1 x FD + DC offset detector)

Figure 20. Test circuit

## 5 I<sup>2</sup>C Bus specification

### 5.1 Interface protocol

The interface protocol comprises:

- a start condition (S)
- a chip address byte (the LSB determines read/write transmission)
- a subaddress byte
- a sequence of data (N-bytes + acknowledge)
- a stop condition (P)
- the max. clock speed is 500kbits/s
- 3.3V logic compatible

#### 5.1.1 Receive mode

S	1	0	0	0	1	0	0	R/W	ACK	TS	X	AI	A4	A3	A2	A1	A0	ACK	DATA	ACK	P
---	---	---	---	---	---	---	---	-----	-----	----	---	----	----	----	----	----	----	-----	------	-----	---

S = Start

R/W = "0" -> Receive Mode (Chip can be programmed by μP)

"1" -> Transmission Mode (Data could be received by μP)

ACK = Acknowledge

P = Stop

TS = Testing mode

AI = Auto increment

#### 5.1.2 Transmission mode

S	1	0	0	0	1	0	0	R/W	ACK	X	X	X	X	X	X	X	BZ	SM	ACK	P
---	---	---	---	---	---	---	---	-----	-----	---	---	---	---	---	---	---	----	----	-----	---

SM = Soft mute activated for main channel

BZ = Softstep Busy ('0' = Busy)

X = Not Used

The transmitted data is automatic updated after each ACK. Transmission can be repeated without new chip address.

#### 5.1.3 Reset condition

A Power-On-Reset is invoked if the supply voltage is below than 3.5V. After that the registers are initialized to the default data written in following tables.

Table 9. Subaddress (receive mode)

MSB								LSB	Function

	0 1							Clock Source <sup>(2)</sup> external (at mute pin) <u>Internal (200kHz)</u>
x								Not Used

1. The control bit needs both I2C test mode on & sub-address test mode on.

2. The control bit does not depend on test mode.

Table 26. Testing audio processor 2 (20)

MSB				LSB				Function
D7	D6	D5	D4	D3	D2	D1	D0	
							0 1	Test Architecture <sup>(1)</sup> <u>normal</u> Split
						0 1		Oscillator Clock <sup>(2)</sup> 400kHz 800kHz

			0 0 1 1	0 1 0 1				Request for Clk Generator <sup>(1)</sup> Allow Allow Stopped Stopped
x	x	x						Not Used

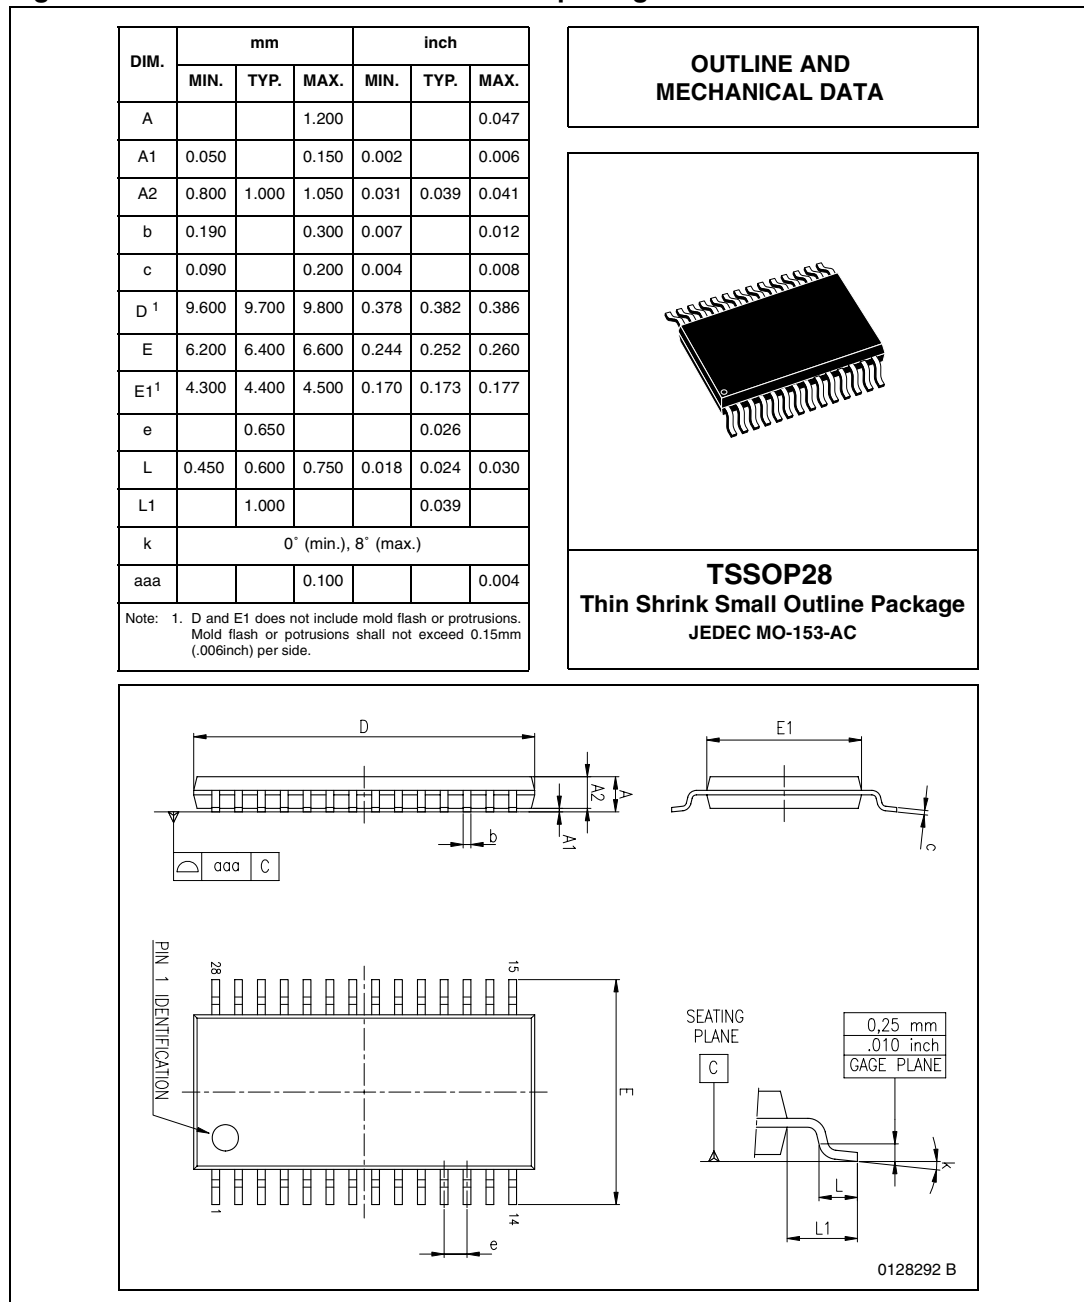

1. The control bit needs sub-address test mode on
2. The control bit does not depend on test mode.

## 6 Package information

In order to meet environmental requirements, ST (also) offers these devices in ECOPACK<sup>®</sup> packages. ECOPACK<sup>®</sup> packages are lead-free. The category of second Level Interconnect is marked on the package and on the inner box label, in compliance with JEDEC Standard JESD97. The maximum ratings related to soldering conditions are also marked on the inner box label.

ECOPACK is an ST trademark. ECOPACK specifications are available at: [www.st.com](http://www.st.com).

## 7 Revision history

**Table 27. Document revision history**

Date	Revision	Changes
16-Jul-2007	1	Initial release.
7-Jan-2007	2	Added and updated the values on the <a href="#">Table 5: Electrical characteristics</a> . Document status promoted from preliminary data to datasheet.

**Please Read Carefully:**

Information in this document is provided solely in connection with ST products. STMicroelectronics NV and its subsidiaries ("ST") reserve the right to make changes, corrections, modifications or improvements, to this document, and the products and services described herein at any time, without notice.

All ST products are sold pursuant to ST's terms and conditions of sale.

Purchasers are solely responsible for the choice, selection and use of the ST products and services described herein, and ST assumes no liability whatsoever relating to the choice, selection or use of the ST products and services described herein.

No license, express or implied, by estoppel or otherwise, to any intellectual property rights is granted under this document. If any part of this document refers to any third party products or services it shall not be deemed a license grant by ST for the use of such third party products or services, or any intellectual property contained therein or considered as a warranty covering the use in any manner whatsoever of such third party products or services or any intellectual property contained therein.

**UNLESS OTHERWISE SET FORTH IN ST'S TERMS AND CONDITIONS OF SALE ST DISCLAIMS ANY EXPRESS OR IMPLIED WARRANTY WITH RESPECT TO THE USE AND/OR SALE OF ST PRODUCTS INCLUDING WITHOUT LIMITATION IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE (AND THEIR EQUIVALENTS UNDER THE LAWS OF ANY JURISDICTION), OR INFRINGEMENT OF ANY PATENT, COPYRIGHT OR OTHER INTELLECTUAL PROPERTY RIGHT.**

**UNLESS EXPRESSLY APPROVED IN WRITING BY AN AUTHORIZED ST REPRESENTATIVE, ST PRODUCTS ARE NOT RECOMMENDED, AUTHORIZED OR WARRANTED FOR USE IN MILITARY, AIR CRAFT, SPACE, LIFE SAVING, OR LIFE SUSTAINING APPLICATIONS, NOR IN PRODUCTS OR SYSTEMS WHERE FAILURE OR MALFUNCTION MAY RESULT IN PERSONAL INJURY, DEATH, OR SEVERE PROPERTY OR ENVIRONMENTAL DAMAGE. ST PRODUCTS WHICH ARE NOT SPECIFIED AS "AUTOMOTIVE GRADE" MAY ONLY BE USED IN AUTOMOTIVE APPLICATIONS AT USER'S OWN RISK.**

Resale of ST products with provisions different from the statements and/or technical features set forth in this document shall immediately void any warranty granted by ST for the ST product or service described herein and shall not create or extend in any manner whatsoever, any liability of ST.

ST and the ST logo are trademarks or registered trademarks of ST in various countries.

Information in this document supersedes and replaces all information previously supplied.

The ST logo is a registered trademark of STMicroelectronics. All other names are the property of their respective owners.
