

5150-BIT CCD LINEAR IMAGE SENSOR

The μPD3737 is a 5150-bit high sensitivity CCD (Charge Coupled Device) linear image sensor which changes optical images to electrical signal.

The μPD3737 has high speed CCD register, so it is suitable for high resolution scanners and facsimiles which scan high definition document at high speed.

FEATURES

- Valid photocell 5150-bit
- Photocell's pitch 7 μm
- High response sensitivity Providing a response 4.3 times better than the existing equivalent NEC product (μPD3571) to the light from a daylight fluorescent lamp
- Peak response wavelength 550 nm (green)
- Resolution 16 dot/mm across the shorter side of an A3-size (297 × 420 mm) sheet, 24 dot/mm across the shorter side of an A4-size (210 × 297 mm) sheet
- Power supply +12 V
- Drive clock level CMOS output under 5V operation
- High speed scan 252 μs/line
- Data rate 20 MHz

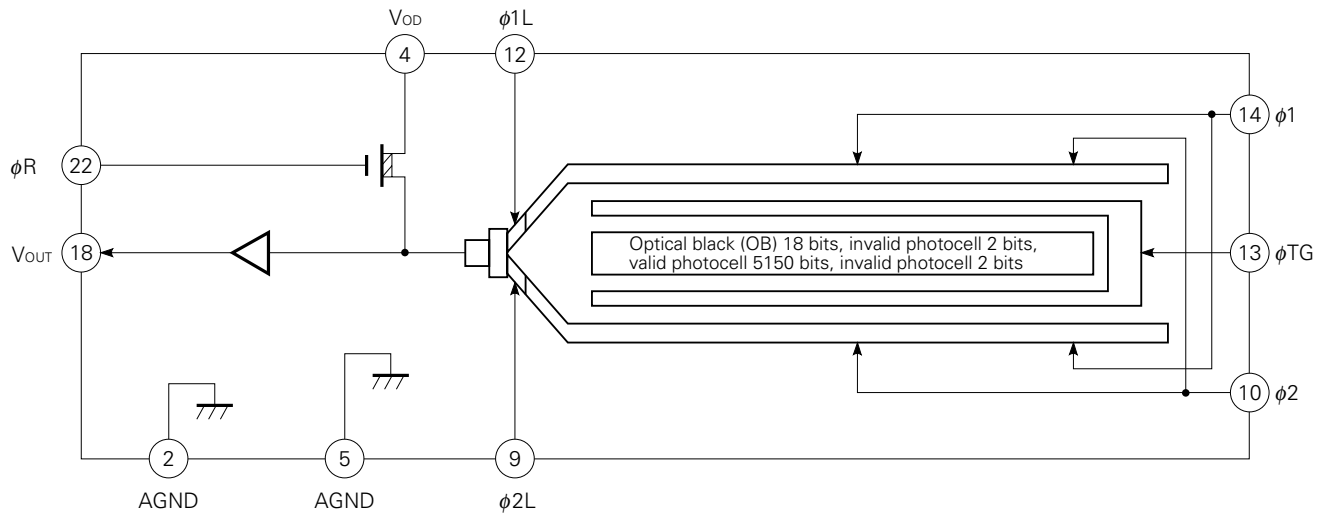

ORDERING INFORMATION

Part Number	Package	Quality Grade
μPD3737D	CCD LINEAR IMAGE SENSOR 22 PIN CERAMIC DIP (CERDIP) (400 mil)	Standard

Please refer to "Quality grade on NEC Semiconductor Devices" (Document number IEI-1209) published by NEC Corporation to know the specification of quality grade on the devices and its recommended applications.

The information in this document is subject to change without notice.

BLOCK DIAGRAM

PIN CONFIGURATION (Top View)

CCD LINEAR IMAGE SENSOR 22 PIN CERAMIC DIP (CERDIP) (400 mil)

PHOTOELEMENT STRUCTURE DIAGRAM

ABSOLUTE MAXIMUM RATINGS (T_a = +25 °C)

Parameter	Symbol	Ratings	Unit
Output unit drain voltage	V _{OD}	-0.3 to +15	V
Shift register clock voltage	V _{φ1, φ2}	-0.3 to +15	V
Last-stage shift register clock voltage	V _{φ1L, Vφ2L}	-0.3 to +15	V
Reset signal voltage	V _{φR}	-0.3 to +15	V
Transfer gate signal voltage	V _{φTG}	-0.3 to +15	V
Operating ambient temperature	T _{opt}	-25 to +55	°C
Storage temperature	T _{stg}	-40 to +100	°C

RECOMMENDED OPERATING CONDITIONS (T_a = -25 to + 55 °C)

Parameter	Symbol	MIN.	TYP.	MAX.	Unit
Output unit drain voltage	V _{OD}	11.4	12.0	12.6	V
Shift register clock signal high level	V _{φ1H, Vφ2H, Vφ1LH, Vφ2LH}	4.5	5.0	5.5	V
Shift register clock signal low level	V _{φ1L, Vφ2L, Vφ1LL, Vφ2LL}	-0.3	0	+0.5	V
Reset signal φR high level	V _{φRBH}	4.5	5.0	5.5	V
Reset signal φR low level	V _{φRBL}	-0.3	0	+0.5	V
Transfer gate signal high level	V _{φTGH}	4.5	V _{φ1H}	V _{φ1H}	V
Transfer gate signal low level	V _{φTGL}	-0.3	0	+0.5	V
Data rate	f _{φR}	0.5	1	20	MHz

Remark 1. Input reset signal φR to pin 22 via capacitor. Concerning the connection method refer to **APPLICATION EXAMPLE**.

2. Operating conditions of reset signal φR is not the condition at device pins but the conditions of the signal which applied to capacitor.
3. When V_{φTGH} > V_{φ1H}, image lag increases.

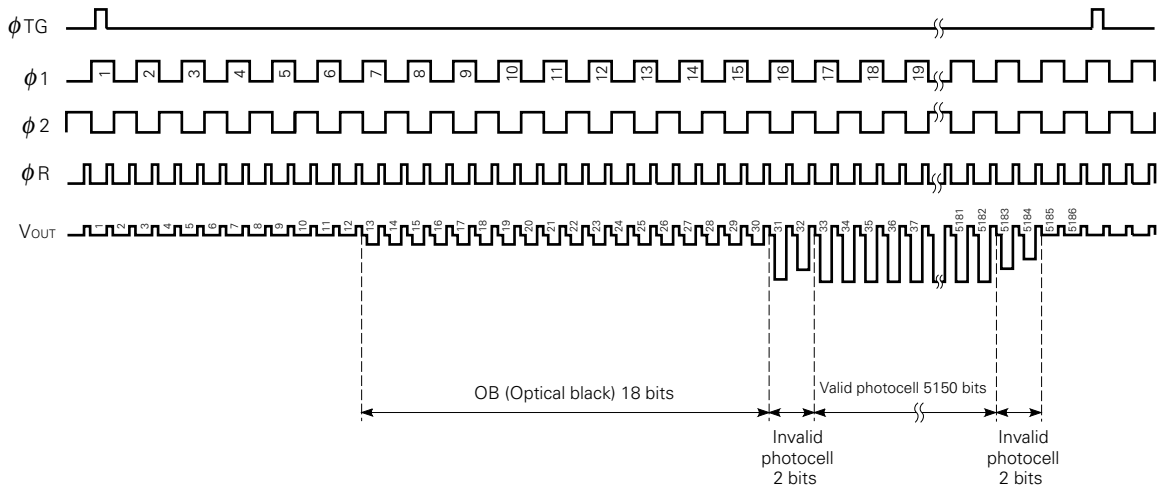

ELECTRICAL CHARACTERISTICS

($T_a = +25\text{ }^\circ\text{C}$, $V_{DD} = 12\text{ V}$, $f_{\phi 1} = 0.5\text{ MHz}$, data rate = 1 MHz, storage time = 10 ms
light source: 3200 K halogen lamp + C500 (infrared cut filter), input clock = 5 V_{P-P})

Parameter	Symbol	Test Conditions	MIN.	TYP.	MAX.	Unit
Saturation voltage	V _{sat}		1.0	1.5		V
Saturation exposure	SE	Daylight color fluorescent lamp		0.2		lx·s
Photo response non-uniformity	PRNU	V _{OUT} = 500 mV		±5	±10	%
Average dark signal	ADS	Light shielding		1.0	3.0	mV
Dark signal non-uniformity	DSNU	Light shielding	-3	+3 -1	+6	mV
Power consumption	P _w			100		mW
Output impedance	Z _o			0.2	0.5	kΩ
Response	R _F	Daylight color fluorescent lamp	6	7.5	9	V/lx·s
Response peak wavelength				550		nm
Image lag	IL	V _{OUT} = 1 V		0.3	1	%
Offset level	V _{OS}		2.0	3.0	5.0	V
Input capacity of shift register clock pin	C _{φ1} C _{φ2}			800		pF
Input capacity of last-stage shift register clock pin	C _{φ1L} C _{φ2L}			50		pF
Input capacity of reset pin	C _{φR}			10		pF
Input capacity of transfer gate clock pin	C _{φTG}			150		pF
Output fall delay time	t _d ^{Note}	Time from 90 % to 10 % of φ _{2L} fall is 5ns.		25		ns
Register imbalance	RI	V _{OUT} = 500 mV		0	4	%
Transfer efficiency	TTE	V _{OUT} = 500 mV, f _{φR1} = 20 MHz	92	98		%
Dynamic range	DR	V _{sat} /DSNU		500		times
Reset feed-through noise	RFSN	Light shielding		250	500	mV

Note t_d is defined as a time from 10 % of φ_{2L} to 10 % of V_{OUT}, output after passing through two steps of emitter follower in the application example.

TIMING CHART 1

TIMING CHART 2

TIMING CHART for φTG, φ1, φ2

(Unit: ns)

Parameter	MIN.	TYP.	MAX.
t ₁ , t ₂	0	50	(150)
t ₁ ' , t ₂ '	0	5	(25)
t ₃	15	50	(500)
t ₄	5	20	(500)
t ₅ , t ₆	0	20	(50)
t ₇ , t ₈	0	50	(100)
t ₉	500	1000	(5000)
t ₁₀ , t ₁₁	0	100	(500)

Remark The MAX. in the table above shows the operation range in which the output characteristics are kept almost enough for general purpose, does not show the limit above which the μPD3737 is destroyed.

CROSS POINTS for φ1, φ2

CROSS POINTS for φ1L, φ2

CROSS POINTS for φ1, φ2L

Remark Adjust cross point of (φ1, φ2), (φ1L, φ2), (φ1, φ2L) by each pin external input resistor.

DEFINITIONS OF CHARACTERISTIC ITEMS

1. Saturation voltage: V_{sat}
Output signal voltage at which the response linearity is lost.

2. Saturation exposure: SE
Product of intensity of illumination (Ix) and storage time (s) when saturation of output voltage occurs.

3. Photo response non-uniformity: PRNU
The peak/bottom ratio to the average output voltage of all the valid bits calculated by the following formula.

$$PRNU (\%) = \left(\frac{V_{MAX. \text{ or } V_{MIN.}}}{\frac{1}{n} \sum_{j=1}^n V_j} - 1 \right) \times 100$$

n : Number of valid bits
 V_j : Output voltage of each bit

4. Average dark signal: ADS
Output average voltage in light shielding.

$$ADS(mV) = \frac{1}{n} \sum_{j=1}^n V_j$$

5. Dark signal non-uniformity: DSNU
The difference between peak or bottom output voltage in light shielding and ADS.

- 6. Output impedance: Z_o
Output pin impedance viewed from outside.
- 7. Response: R
Output voltage divided by exposure (lx·s).
Note that the response varies with the light source.

- 8. Image Lag: IL
The rate between the last output voltage and the next one after read out the data of a line.

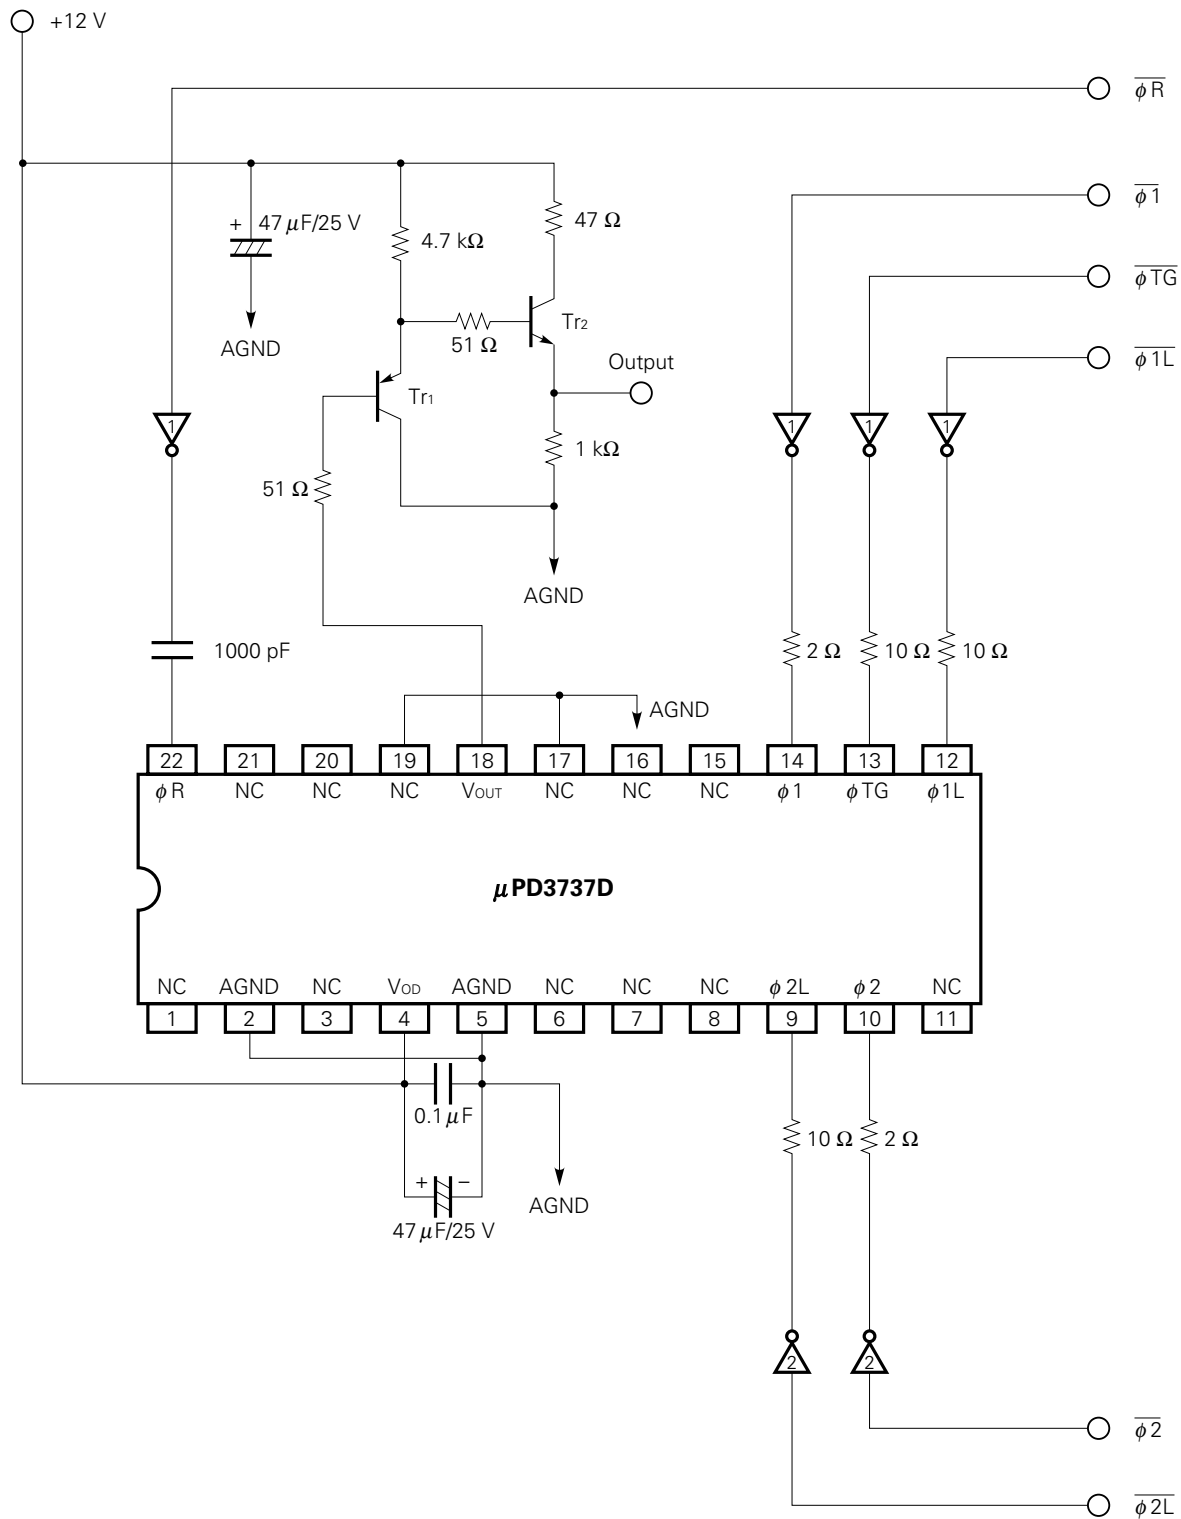

- 9. Register Imbalance: RI
The rate of the difference between the average of the output voltage of Odd and Even bits, against the average output voltage of all the valid bits.

$$RI = \frac{\frac{2}{n} \left| \sum_{j=1}^{\frac{n}{2}} (V_{2j-1} - V_{2j}) \right|}{\frac{1}{n} \sum_{j=1}^n V_j} \times 100 (\%)$$

STANDARD CHARACTERISTIC CURVES ($T_a = 25\text{ }^\circ\text{C}$)

APPLICATION EXAMPLE

1. 74AC04 Tr₁ 2SA1005
2. 74AC04 Tr₂ 2SC945

PACKAGE DIMENSIONS

CCD LINEAR IMAGE SENSOR 22PIN CERAMIC DIP (CERDIP) (400mil)

(Unit : mm)

Name	Dimensions	Refractive index
Glass cap	47.5×9.25×0.7	1.5

22D-1CCD-PKG7

RECOMMENDED SOLDERING CONDITIONS

The following conditions (see table below) must be met when soldering this product.

For more details, refer to our document “**SEMICONDUCTOR DEVICE MOUNTING TECHNOLOGY MANUAL**” (IEI-1207).

Please consult with our sales offices in case other soldering process is used, or in case soldering is done under different conditions.

Table 1 Type of Through Hole Device

μPD3737D: CCD LINEAR IMAGE SENSOR 22 PIN CERAMIC DIP (CERDIP) (400 mil)

Soldering Process	Soldering Conditions
Wave soldering (For leads only)	Solder temperature: 260 °C or below, Flow time: 10 seconds or below
Partial heating method	Pin temperature: 260 °C or below, Time: 10 seconds or below

Caution Do not jet molten solder on the surface of package.

NOTES FOR CMOS DEVICES

① PRECAUTION AGAINST ESD FOR SEMICONDUCTORS

Note: Strong electric field, when exposed to a MOS device, can cause destruction of the gate oxide and ultimately degrade the device operation. Steps must be taken to stop generation of static electricity as much as possible, and quickly dissipate it once, when it has occurred. Environmental control must be adequate. When it is dry, humidifier should be used. It is recommended to avoid using insulators that easily build static electricity. Semiconductor devices must be stored and transported in an anti-static container, static shielding bag or conductive material. All test and measurement tools including work bench and floor should be grounded. The operator should be grounded using wrist strap. Semiconductor devices must not be touched with bare hands. Similar precautions need to be taken for PW boards with semiconductor devices on it.

② HANDLING OF UNUSED INPUT PINS FOR CMOS

Note: No connection for CMOS device inputs can be cause of malfunction. If no connection is provided to the input pins, it is possible that an internal input level may be generated due to noise, etc., hence causing malfunction. CMOS devices behave differently than Bipolar or NMOS devices. Input levels of CMOS devices must be fixed high or low by using a pull-up or pull-down circuitry. Each unused pin should be connected to V_{DD} or GND with a resistor, if it is considered to have a possibility of being an output pin. All handling related to the unused pins must be judged device by device and related specifications governing the devices.

③ STATUS BEFORE INITIALIZATION OF MOS DEVICES

Note: Power-on does not necessarily define initial status of MOS device. Production process of MOS does not define the initial operation status of the device. Immediately after the power source is turned ON, the devices with reset function have not yet been initialized. Hence, power-on does not guarantee out-pin levels, I/O settings or contents of registers. Device is not initialized until the reset signal is received. Reset operation must be executed immediately after power-on for devices having reset function.

The devices listed in this document are not suitable for use in aerospace equipment, submarine cables, nuclear reactor control systems and life support systems. If customers intend to use NEC devices for above applications or they intend to use "Standard" quality grade NEC devices for applications not intended by NEC, please contact our sales people in advance.

Application examples recommended by NEC Corporation

Standard: Computer, Office equipment, Communication equipment, Test and Measurement equipment, Machine tools, Industrial robots, Audio and Visual equipment, Other consumer products, etc.

Special: Automotive and Transportation equipment, Traffic control systems, Antidisaster systems, Anticrime systems, etc.
