

# VKA100xS

## 100 Watt Single Output Half Brick DC/DC Converter

- 18-36V and 33 - 75V Input Range
- High Efficiency: 87% Typical at 5V
- 100µS Transient Response 50-100% Load Step
- 420 kHz Fixed-Frequency Operation
- Remote Sense
- Operation to +100°C Baseplate Temperature
- Primary Remote On/Off, Choice of Pos/Neg Logic
- Adjustable Output Voltage
- Continouot Short-Circuit Protection
- Thermal Shutdown
- Case Ground Pin

The VKA100xS Series DC/DC converters present an economical and practical solution for distributed power system architectures which require high power density and efficiency while maintaining system modularity and upgradeability. With the ability to operate over a wide input voltage range of 18 to 36 and 33 to 75

volts, these modules are ideal for use in battery backup applications common in today's telecommunication and electronic data processing applications. The output is fully isolated from the input, allowing for a variety of polarity and grounding configurations.

The VKA100xS's proprietary control circuitry responds to 50-

100% load steps in 100µSeconds to within 1% nominal Vout.

The patented fixed frequency architecture combined with surface mount technology results in a compact, efficient and reliable solution to DC/DC conversion requirements. Safety Per UL1950, EN 60950 and CSA 22.2 #234

### PRODUCT SELECTION CHART

MODEL	INPUT VOLTAGE	VOUT (VDC)	IOUT (A)	EFFICIENCY	
				MIN	TYP
VKA100LS02		2.0V	20.0	75	76
VKA100LS02F		2.0V	30.0	73	74
VKA100LS2V5F		2.5V	30.0	75	76
VKA100LS03		3.3V	20.0	80	81
VKA100LS03F		3.3V	30.0	80	81
VKA100LS05	24VDC	5.0V	20.0	85	86
VKA100LS12		12.0V	8.3	87	88
VKA100LS15	(18-36)	15.0V	6.7	88	89
VKA100LS24		24.0V	4.2	89	90
VKA100MS02		2.0V	20.0	76	77
VKA100MS02F		2.0V	30.0	74	75
VKA100MS2V5F		2.5V	30.0	77	78
VKA100MS03		3.3V	20.0	81	82
VKA100MS03F		3.3V	30.0	81	82
VKA100MS05	48VDC	5.0V	20.0	86	87
VKA100MS12		12.0V	8.3	88	89
VKA100MS15	(33-75)	15.0V	6.7	89	90
VKA100MS24		24.0V	4.2	89	90

# SPECIFICATIONS, ALL MODELS

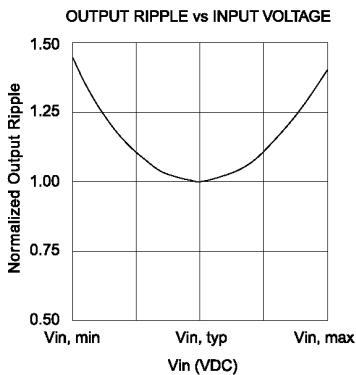

Specifications are at  $T_{CASE} = +40^{\circ}C$  nominal input voltage unless otherwise specified.

	PARAMETER	CONDITIONS	MIN	TYP	MAX	UNITS

**SIDE VIEW**

**NOTES:**

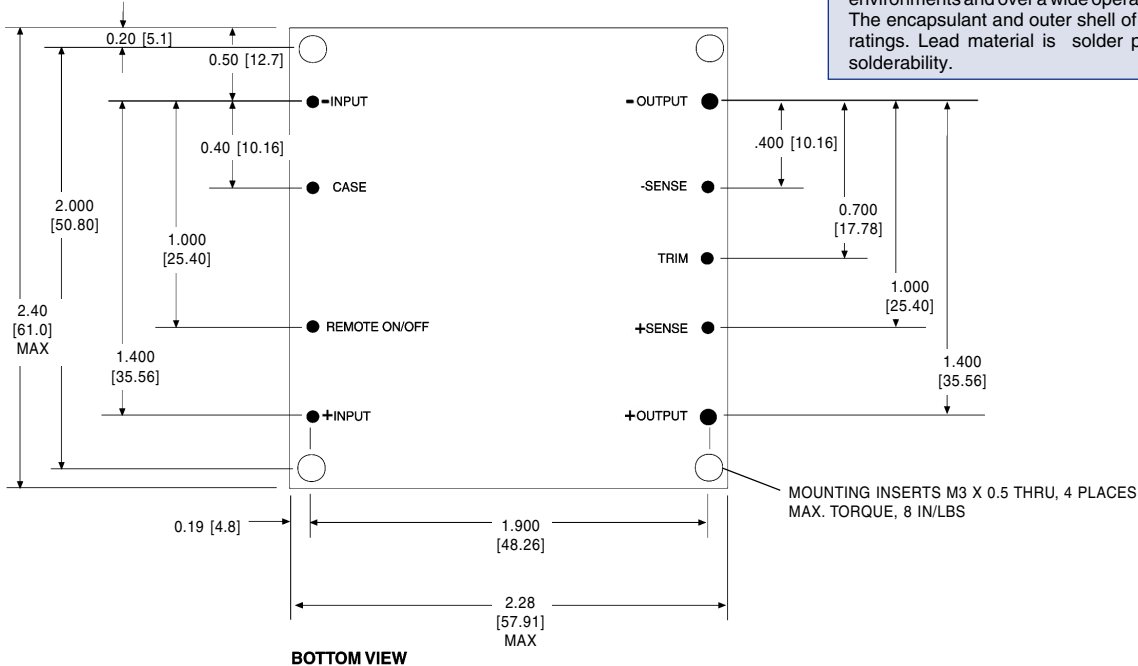

All dimensions are in inches (millimeters).

PIN PLACEMENT TOLERANCE: ± 0.005"

MECHANICAL TOLERANCE: ± 0.015"

Marked with: specific model, ordered, date code, job code.

**MATERIAL:** Units are encapsulated in a low thermal resistance molding compound which has excellent chemical resistance and electrical properties in high humidity environments and over a wide operating temperature range. The encapsulant and outer shell of the unit have UL94V-0 ratings. Lead material is solder plated to allow ease of solderability.

**BOTTOM VIEW**

## OUTPUT ADJUST VOLTAGE

This feature allows the user to accurately adjust the module's output voltage set point to a specified level. This is achieved by connecting a resistor or potentiometer from the TRIM terminal to either the +V<sub>out</sub> terminal (for increased V<sub>out</sub>) or the -V<sub>out</sub> terminal (for decreased V<sub>out</sub>). The formulae below describe the trim resistor value to obtain a V<sub>out</sub> change of Δ%. V<sub>o</sub> is output voltage prior to adjustment (3.3V, 5V, 12V, 15V, or 24V).

$$R_{adj - up} = \left( \frac{V_o(100 + \Delta\%)}{1.225\Delta\%} - \frac{(100 + 2\Delta\%)}{\Delta\%} \right) k\Omega$$

$$R_{adj - down} = \left( \frac{100}{\Delta\%} - 2 \right) k\Omega$$

## OVP NOTE

Special attention should be given to the peak voltage deviation during a dynamic load step when trimming the output above the original set point to avoid tripping the overvoltage protection circuit. Should an OVP condition occur, the converter will go into a latch condition and must be externally reset before it will return to normal operation.
