- Notes:
- Output filtering capacitors C1, C2, and C3 are electrolytic capacitors. It is recommended to use high frequency and low impedance electrolytic capacitors. For capacitance and current of capacitor please refer to manufacture's datasheet. Voltage derating of capacitor should be 80% or above. C2, C4, and C6 are used to filter high frequency noise and it is suggested that 0.1 μF capacitors are used. TVS is recommended component to protect post-circuits (when converter fails).
 - External input NTC is recommended to use 5D-9
