

# W91580 SERIES

## 24-MEMORY TONE/PULSE SWITCHABLE DIALER WITH HANDFREE AND HOLD FUNCTIONS

### GENERAL DESCRIPTION

The W91580 series dialers are Si-gate CMOS IC tone/pulse switchable dialers containing a 24-channel automatic dialing memory, including a 16-digit  $\times$  3 emergency dialing memory, a 16-digit  $\times$  20 channel repertory memory that provides one-touch and three-touch dialing, and a 32-digit mercury memory. These dialers also provide flash, clear, hold, and one-key redial functions.

### FEATURES

- DTMF/Pulse switchable dialer
- 31/32-digit LNB (last number buffer) memory (tone/pulse mode)
- 31/32-digit mercury memory (tone/pulse mode)
- 15/16-digit  $\times$  3 one-touch direct repertory memory (tone/pulse mode)
- 15/16-digit  $\times$  20 direct or indirect repertory memory (tone/pulse mode)
- Uses 9  $\times$  5 keyboard
- Flash time: 98 mS, 305 mS, or 600 mS (selectable by keypad option)
- Pause time: 3.6 sec.
- Pause and P $\rightarrow$ T (pulse-to-tone) can be stored as a digit in memory
- Minimum tone output duration: 100 mS
- Minimum intertone pause: 100 mS
- On-chip power-on reset
- Uses 3.579545 MHz crystal or ceramic resonator
- Packaged in 22, 24, or 28-pin plastic DIP
- The different dialers in the W91580 series are shown in the following table:

TYPE NO.	PULSE (ppS)	MEMORY	MERCURY MEMORY	HOLD	HANDFREE	PACKAGE
W91580	10	20	-	-	-	22
W91580A	10	20	-	-	Yes	24
W91580B	10/20	24	Yes	Yes	Yes	28
W91580C	10/20	24	Save	Yes	Yes	28

## PIN CONFIGURATIONS

## PIN DESCRIPTION

SYMBOL	22-PIN	24-PIN	28-PIN	I/O	FUNCTION
Column-Row Inputs	1-7 & 18-22	1-7 & 20-24	1-8 & 24-28	I	The keyboard input may be used with either the standard 9 × 5 keyboard or an inexpensive single contact (form A) keyboard. Electronic input from a $\mu$ C can also be used. A valid key entry is defined by a single row being connected to a single column.
XT, $\overline{\text{XT}}$	9, 10	9, 10	11, 12	I, O	A built-in inverter provides oscillation with an inexpensive 3.579545 MHz crystal or ceramic resonator.
T/P $\overline{\text{MUTE}}$	11	11	13	O	The T/P $\overline{\text{MUTE}}$ is a conventional CMOS N-channel open drain output. The output transistor is switched on during pulse and tone mode dialing sequence and flash break. Otherwise, it is switched off.
HPM MUTE	-	-	23	O	The HPM MUTE is a conventional inverter output. During pulse dialing, flash, hold, and mercury mute functions, this pin will output an active high. It remains in a low state at all other times.

# W91580 SERIES

Pin Description, continued

SYMBOL	22-PIN	24-PIN	28-PIN	I/O	FUNCTION																																				
MODE	15	17	19	I	Pulling mode pin to V <sub>SS</sub> places the dialer in tone mode. Pulling mode pin to V <sub>DD</sub> places the dialer in pulse mode (10 ppS, M/B = 2:3). Leaving mode pin floating places the dialer in pulse mode (10 ppS, M/B = 1:2).																																				
$\overline{\text{HKS}}$	12	14	16	I	Hook switch input. $\overline{\text{HKS}} = 1$ : On-hook state. Chip in sleep mode, no operation. $\overline{\text{HKS}} = 0$ : Off-hook state. Chip enabled for normal operation. $\overline{\text{HKS}}$ pin is pulled to V <sub>DD</sub> by internal resistor.																																				
$\overline{\text{DP/C9}}$	13	15	17	O	N-channel open drain dialing pulse output (see Figure 1). Flash key causes $\overline{\text{DP}}$ to go active when in pulse mode and tone mode.																																				
NC	17	19	22	-	No connection.																																				
DTMF	14	16	18	O	In pulse mode, remains in low state at all times. In tone mode, outputs a dual or single tone. Detailed timing diagram for tone mode is shown in Figure 2. <table border="1" data-bbox="803 1165 1388 1507"> <thead> <tr> <th colspan="4">OUTPUT FREQUENCY</th> </tr> <tr> <th></th> <th>Specified</th> <th>Actual</th> <th>Error %</th> </tr> </thead> <tbody> <tr> <td>R1</td> <td>697</td> <td>699</td> <td>+0.28</td> </tr> <tr> <td>R2</td> <td>770</td> <td>766</td> <td>-0.52</td> </tr> <tr> <td>R3</td> <td>852</td> <td>848</td> <td>-0.47</td> </tr> <tr> <td>R4</td> <td>941</td> <td>948</td> <td>+0.74</td> </tr> <tr> <td>C1</td> <td>1209</td> <td>1216</td> <td>+0.57</td> </tr> <tr> <td>C2</td> <td>1336</td> <td>1332</td> <td>-0.30</td> </tr> <tr> <td>C3</td> <td>1477</td> <td>1472</td> <td>-0.34</td> </tr> </tbody> </table>	OUTPUT FREQUENCY					Specified	Actual	Error %	R1	697	699	+0.28	R2	770	766	-0.52	R3	852	848	-0.47	R4	941	948	+0.74	C1	1209	1216	+0.57	C2	1336	1332	-0.30	C3	1477	1472	-0.34

## BLOCK DIAGRAM

## FUNCTIONAL DESCRIPTION

### Keyboard Operation

C1	C2	C3	C4	C5	C6	C7	$\overline{DP/C9}$	C8	
1	2	3	S	M00	M05	M10	M15	EM1	R1
4	5	6	MEMO	M01	M06	M11	M16	EM2	R2
7	8	9	CLR	M02	M07	M12	M17	EM3	R3
*T	0	#	R/P	M03	M08	M13	M18	H	R4
F1	F2	F3	R	M04	M09	M14	M19	*MER	R5

\* MER is for W91580B only; Fin W91580C this key performs Save function.

- S: Store function key
- F1, F2, F3: Flash keys
- R: One-key redial
- H: Hold function key
- $\overline{DP}/\overline{C9}$ : This key is connected to pin  $\overline{DP}/\overline{C9}$  via a bipolar switching transistor and a diode.
- M0j: Direct or indirect (MEMO + M0j = M1j) repertory memory
- M1j: Direct repertory dialing
- EMI: One-touch memory for emergency call
- \*/T: \* & P→T
- CLR: Clear key
- R/P: Redial and pause function key
- MER: One-touch memory for mercury code dialing
- MEMO: Indirect repertory dialing function key

Note: Dn = 0 to 9, \*, #, Mij = M00 to M19 (i = 0, 1; j = 0 to 9).

## Normal Dialing

(or  & ), , , ...,

1. D1, D2, ..., Dn will be dialed out.
2. Dialing length is unlimited, but redial is inhibited if length exceeds 32 digits.

## Redialing

1. , , , ...,  BUSY, Come ,  (or  & ) ,  or  & , , , ..., , BUSY,  Come ,

The  key can execute the redial function only as the first key-in after off-hook; otherwise, it will execute the pause function.

2.  (or  & ) , , , ..., , 
  - a. The one-key redial function timing diagram is shown in Figure 4.
  - b. If dialing  to  is completed, pressing the  key will cause the pulse output of pin to go low for 2.2 seconds. Break time and a 600 mS pause will automatically be added.
  - c. If the  key is pressed before the pulses for the number dialed out are completed, it will be ignored.

## Number Store

1.  (or  & ), , , , ...,   
, ,  or

D1, D2, ..., Dn will be stored in memory location but will not be dialed out.

and  keys can be stored as a digit in memory. In store mode  is the pause function key.

The store mode is released after the store function is executed or when the state of the hook switch is changed.

2. , , , ..., , , ,

D1, D2, ..., Dn will be stored in memory location Mij and will not be dialed out.

3. , , , ..., , , ,

a. D1, D2, ..., Dn will be stored in memory location M10 to M19 and will not be dialed out.

b. MEMO + M0j = M1j.

4.  (or  & ), , , ..., , , ,   
(or ,

a. D1, D2, ..., Dn will be stored in memory location and will be dialed out.

b. The  key must be pressed after completion of the dialing sequence.

5. , , ..., , , , ,

D1, D2, ..., Dn will be stored in memory location Mij and will be dialed out.

6. , , ..., , , , ,

a. D1, D2, ..., Dn will be stored in memory location M10 to M19 and will be dialed out.

b. MEMO + M0j = M1j.

## Repertory Dialing

1.  (or  & ),  or  or
2.  (or  & ), , ,
3.  (or  & ), ,

## Access Pause

**OFF HOOK** (or **ON HOOK** & **HFI** ↓ ), **D1** , **D2** , **R/P** , **D3** , ..., **Dn**

1. The pause function can be stored in memory.
2. The pause function is executed in normal dialing, redialing, or memory dialing.
3. The pause function timing diagram is shown in Figure 5.

### Pulse-to-Tone (\* / T)

**OFF HOOK** (or **ON HOOK** & **HFI** ↓ ), **D1** , **D2** , ..., **Dn** ,  
**\*/T** , **D1'** , **D2'** , ..., **Dn'**

1. If the mode switch is set to pulse mode, then the output signal will be:  
 D1, D2, ..., Dn, Pause (3.6s) , D1', D2', ..., Dn'  
 (Pulse) (Tone)
2. If the mode switch is set to tone mode, then the output signal will be:  
 D1, D2, ..., Dn, \* , D1', D2', ..., Dn'  
 (Tone) (Tone) (Tone)
3. The dialer remains in tone mode when the digits have been dialed out and can be reset to pulse mode only by going on-hook.
4. The P→T function timing diagram is shown in Figure 6.
5. \* / T key can be stored as a digit in memory

### Flash (F = F1, F2, F3)

**OFF HOOK** (or **ON HOOK** & **HFI** ↓ ), **F**

1. Flash key cannot be stored as a digit in memory, and it has first priority among keyboard functions.
2. The system will return to the initial state after the break time is finished.
3. The flash function timing diagram is shown in Figure 7.

### Clear key

1. **CLR** , **R/P** (or **R** )  
 Redial and one-key redial buffer will be cleared.
2. **CLR** , **Mij**  
 Location Mij buffer content will be cleared.
3. **CLR** , **i** , **j**  
 Location Mij buffer content will be cleared.
4. **CLR** , **MEMO** , **M0j**  
 Location M1j buffer content will be cleared.

### Save

# W91580 SERIES

1.  (or  & ), D1, D2, ..., , ,   
Dn

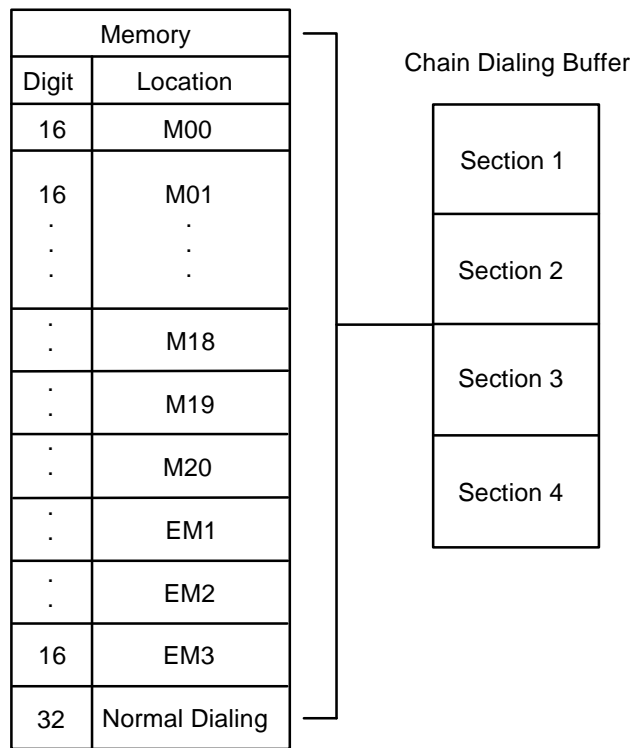

D1, D2, ..., Dn will be stored in save memory and dialed out.

2.  (or  & ), , D1, D2, ..., Dn ,

D1, D2, ..., Dn will be stored in save memory but will not be dialed out.

## CHAIN DIALING

Relationship between the memory and the chain dialing buffer:

The chain dialing buffer may be divided into four sections, allowing up to four numbers to be dialed out in sequence. For example, if the user enters M01, M03, EM1, and normal dialing (manual dialing), the content of sections 1 to 4 will be M01, M03, EM1, and normal dialing (manual dialing). When numbers are entered into the chain dialing buffer, there is no need to wait until the previous dialing sequence has been completed. Numbers may be entered directly, one after the other, even while previous numbers are being dialed out.

1.  +

Redial buffer content = Manual dialing + Repertory dialing.

2.  +

Redial buffer content = Repertory dialing + Manual dialing.

3. Repertory Dialing + Repertory Dialing

Redial buffer content = Repertory dialing + Repertory dialing.

4. Redialing + Manual Dialing

Redial buffer content = Redialing + Manual dialing.

The primary redial content may not be manual dialing. Otherwise, the last redial content will be overwritten.

5. Redialing + Repertory Dialing

Redial buffer content = Redialing + Repertory dialing.

Redialing is valid only as the first key-in after off-hook or after the handfree dialing function is toggled on.

The second sequence should not be performed until the first sequence is completely dialed out.

6. Manual Dialing + One Key Redialing

Redial buffer content = Manual dialing.

The one-key redial may only be used after dialing out of a manual dialing sequence is completed.

7. Repertory Dialing 1 (M1) + One Key Redialing +  
Repertory Dialing 2 (M2) + One Key Redialing

or

Repertory Dialing 1 (M1) + One Key Redialing +  
Repertory Dialing 2 (M2) , ON HOOK , OFF HOOK , Redialing

M1 and M2 represent any of the repertory dialing memories.

The first redialing will dial out M1; the second will dial out M1, M2.

If dialing out of the repertory dialing memories has not been completed, the one-key redial key will be ignored.

Dialing of the second repertory dialing memory (M2) should not be performed until the one-key redialing operation is completed.

Notes:

1. Chain dialing (cascaded dialing) allows for memory or manual dialing while a previous dialing sequence is still being dialed out.

2. More than one sequence of manual dialing is not permitted.  
 Entering more than one manual dialing sequence will inhibit redialing.  
 Chain dialing of more than four sections is not permitted.

Manual Dialing + M1 + Manual Dialing (two sections of manual dialing)

3. If more than four sections are entered, all sections after the fourth section will be ignored and redialing will be inhibited.

Manual Dialing + M1 + M2 + M3 + M4 (over 4 sections, ignore M4 and inhibit redial)

4. There is a 2.0 sec. inter-chain dialing pause for cascaded dialing.

## MERCURY DIALING

1. Up to 32 digits may be stored.
2. Mercury dialing is activate only as the first key-in after off-hook or when handfree dialing is activated.
3. The timing diagram for the mercury memory function is shown below.

Mercury Function Timing Diagram

## ABSOLUTE MAXIMUM RATINGS

PARAMETER	SYMBOL	RATING	UNIT
DC Supply Voltage	$V_{DD}-V_{SS}$	-0.3 to +7.0	V
Input/Output Voltage	$V_{IL}$	$V_{SS}-0.3$	V
	$V_{IH}$	$V_{DD}+0.3$	V
	$V_{OL}$	$V_{SS}-0.3$	V
	$V_{OH}$	$V_{DD}+0.3$	V
Power Dissipation	PD	120	mW
Operating Temperature	$T_{OPR}$	-20 to +70	°C
Storage Temperature	$T_{STG}$	-55 to +125	°C

Note: Exposure to conditions beyond those listed under Absolute Maximum Ratings may adversely affect the life and reliability of the device.
