# Digitally Controlled Potentiometer (XDCP™)

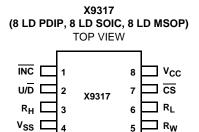

The Intersil X9317 is a digitally controlled potentiometer (XDCP<sup>TM</sup>). The device consists of a resistor array, wiper switches, a control section, and nonvolatile memory. The wiper position is controlled by a 3-wire interface.

The potentiometer is implemented by a resistor array composed of 99 resistive elements and a wiper switching network. Between each element and at either end are tap points accessible to the wiper terminal. The position of the wiper element is controlled by the  $\overline{CS}$ ,  $U/\overline{D}$ , and  $\overline{INC}$  inputs. The position of the wiper can be stored in nonvolatile memory and then be recalled upon a subsequent power-up operation.

The device can be used as a three-terminal potentiometer for voltage control or as a two-terminal variable resistor for current control in a wide variety of applications.

#### **Pinouts**

#### Features

- Solid-State Potentiometer
- 3-Wire Serial Up/Down Interface
- 100 Wiper Tap Points
  - Wiper Position Stored in Nonvolatile Memory and Recalled on Power-up
- 99 Resistive Elements
  - Temperature Compensated
  - End-to-end Resistance Range ±20%
- Low Power CMOS
  - $V_{CC}$  = 2.7V to 5.5V, and 5V ±10%
  - Standby Current <5µA</li>
- High Reliability
  - Endurance, 100,000 Data Changes per Bit
  - Register Data Retention, 100 years
- $R_{TOTAL}$  Values = 1k $\Omega$ , 10k $\Omega$ , 50k $\Omega$ , 100k $\Omega$
- Packages
  - 8 Ld SOIC, PDIP, TSSOP, and MSOP
- Pb-Free Available (RoHS Compliant)

#### Applications

- LCD Bias Control
- DC Bias Adjustment
- Gain and Offset Trim
- Laser Diode Bias Control
- Voltage Regulator Output Control

\*Add "T1" suffix for tape and reel. Please refer to TB347 for details on reel specifications.

\*\*Add "T2" suffix for tape and reel. Please refer to TB347 for details on reel specifications.

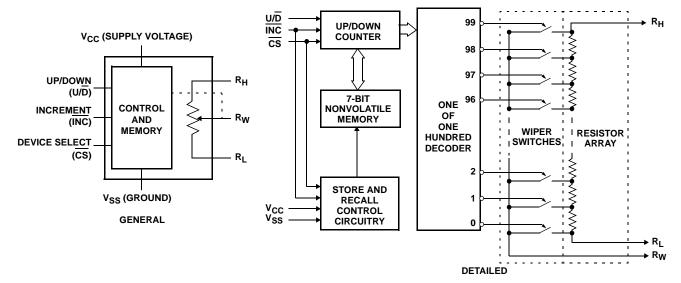

NOTES:

 These Intersil Pb-free plastic packaged products employ special Pb-free material sets, molding compounds/die attach materials, and 100% matte tin plate plus anneal (e3 termination finish, which is RoHS compliant and compatible with both SnPb and Pb-free soldering operations). Intersil Pb-free products are MSL classified at Pb-free peak reflow temperatures that meet or exceed the Pb-free requirements of IPC/JEDEC J STD-020.

2. Not recommended for new designs.

4

### Block Diagram

### **Pin Descriptions**

PDIP/SOIC/MSOP	TSSOP	SYMBOL	BRIEF DESCRIPTION
1	3	INC	<b>Increment</b> Toggling $\overline{INC}$ while $\overline{CS}$ is low moves the wiper either up or down.
2	4	U/D	<b>Up/Down</b> The U/ $\overline{D}$ input controls the direction of the wiper movement.
3	5	R <sub>H</sub>	The high terminal is equivalent to one of the fixed terminals of a mechanical potentiometer.
4	6	V <sub>SS</sub>	Ground
5	7	R <sub>W</sub>	The wiper terminal is equivalent to the movable terminal of a mechanical potentiometer.
6	8	RL	The low terminal is equivalent to one of the fixed terminals of a mechanical potentiometer.
7	1	CS	<b>Chip Select</b> The device is selected when the $\overline{CS}$ input is LOW, and de-selected when $\overline{CS}$ is high.
8	2	V <sub>CC</sub>	Supply Voltage

#### **Absolute Maximum Ratings**

I <sub>W</sub> (10s)
$R_{H}$ , $R_{W}$ , $R_{L}$ to Ground+6V
Voltage on CS, INC, U/D and V <sub>CC</sub>
with Respect to V <sub>SS</sub>

#### **Thermal Information**

Junction Temperature Under Bias	65°C to +135°C
Storage Temperature	65°C to +150°C
Pb-free reflow profile	see link below
http://www.intersil.com/pbfree/Pb-FreeRefle	ow.asp

CAUTION: Do not operate at or near the maximum ratings listed for extended periods of time. Exposure to such conditions may adversely impact product reliability and result in failures not covered by warranty.

SYMBOL	PARAMETER	TEST CONDITIONS/NOTES	MIN (Note 8)	TYP (Note 4)	MAX (Note 8)	UNIT
R <sub>TOTAL</sub>	End-to-end Resistance Tolerance	See "Ordering Information" beginning on page 2 for values	-20		+20	%
V <sub>RH</sub> / <sub>RL</sub>	R <sub>H</sub> /R <sub>L</sub> Terminal Voltage	$V_{SS} = 0V$	V <sub>SS</sub>		V <sub>CC</sub>	V
	Power Rating	$R_{TOTAL} \ge 10 k\Omega$			10	mW
		R <sub>TOTAL</sub> = 1kΩ			25	mW

#### **Endurance and Data Retention** $V_{CC} = 5V \pm 10\%$ , $T_A = Full Operating Temperature Range.$

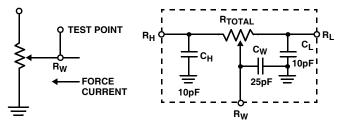

PARAMETER	MIN	UNIT
Minimum Endurance	100,000	Data changes per bit
Data Retention	100	Years

NOTES:

- Absolute linearity is utilized to determine actual wiper voltage versus expected voltage = [V(R<sub>W(n)(actual)</sub>)-V(R<sub>W(n)(expected)</sub>)]/MI V(R<sub>W(n)(expected)</sub>) = n(V(R<sub>H</sub>)-V(R<sub>L</sub>))/99 + V(R<sub>L</sub>), with n from 0 to 99.
- 2. Relative linearity is a measure of the error in step size between taps =  $[V(R_{W(n+1)})-(V(R_{W(n)}) MI)]/MI$ .
- 3. 1 MI = Minimum Increment =  $[V(R_H)-V(R_L)]/99$ .
- 4. Typical values are for  $T_A = +25^{\circ}C$  and nominal supply voltage.
- 5. This parameter is not 100% tested.
- Ratiometric temperature coefficient = (V(R<sub>W</sub>)<sub>T1(n)</sub>-V(R<sub>W</sub>)<sub>T2(n)</sub>)/[V(R<sub>W</sub>)<sub>T1(n)</sub>(T1-T2) x 10<sup>6</sup>], with T1 and T2 being 2 temperatures, and n from 0 to 99.
- 7. Measured with wiper at tap position 99,  $\mathrm{R}_{\mathrm{L}}$  grounded, using test circuit.
- Parameters with MIN and/or MAX limits are 100% tested at +25°C, unless otherwise specified. Temperature limits established by characterization and are not production tested.

Equivalent Circuit

#### **AC Conditions of Test**

Input pulse levels	0V to 3V
Input rise and fall times	10ns
Input reference levels	1.5V

#### AC Electrical Specifications $V_{CC} = 5V \pm 10\%$ , $T_A = Full Operating Temperature Range$ , unless otherwise stated.

7

### Power-up and Down Requirements

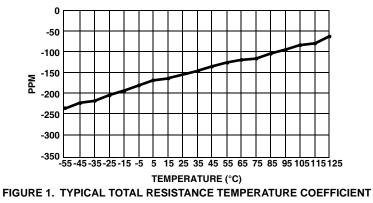

The recommended power-up sequence is to apply  $V_{CC}/V_{SS}$  first, then the potentiometer voltages. During power-up, the data sheet parameters for the DCP do not fully apply until

AC Timing

1ms after V<sub>CC</sub> reaches its final value. The V<sub>CC</sub> ramp spec is always in effect. In order to prevent unwanted tap position changes, or an inadvertent store, bring the  $\overline{CS}$  and  $\overline{INC}$  high before or concurrently with the V<sub>CC</sub> pin on power-up.

### Typical Performance Characteristic

### **Pin Descriptions**

#### $R_H AND R_L$

The high (R<sub>H</sub>) and low (R<sub>L</sub>) terminals of the X9317 are equivalent to the fixed terminals of a mechanical potentiometer. The terminology of R<sub>L</sub> and R<sub>H</sub> references the relative position of the terminal in relation to wiper movement direction selected by the U/ $\overline{D}$  input and not the voltage potential on the terminal.

### $\mathsf{R}_{\mathsf{W}}$

 $R_w$  is the wiper terminal and is equivalent to the movable terminal of a mechanical potentiometer. The position of the wiper within the array is determined by the control inputs. The wiper terminal series resistance is typically 200 $\Omega$ .

#### UP/DOWN (U/D)

The  $U/\overline{D}$  input controls the direction of the wiper movement and whether the counter is incremented or decremented.

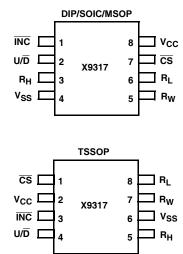

### INCREMENT (INC)

The  $\overline{\text{INC}}$  input is negative-edge triggered. Toggling  $\overline{\text{INC}}$  will move the wiper and either increment or decrement the counter in the direction indicated by the logic level on the  $U/\overline{D}$  input.

### CHIP SELECT (CS)

The device is selected when the  $\overline{CS}$  input is LOW. The current counter value is stored in nonvolatile memory when  $\overline{CS}$  is returned HIGH while the  $\overline{INC}$  input is also HIGH. After the store operation is complete, the X9317 will be placed in the low power standby mode until the device is selected once again.

### Pin Configuration

#### Pin Names

SYMBOL	DESCRIPTION
R <sub>H</sub>	High terminal
RW	Wiper terminal
RL	Low terminal
V <sub>SS</sub>	Ground
V <sub>CC</sub>	Supply voltage
U/D	Up/Down control input
INC	Increment control input
CS	Chip select control input

### **Principles of Operation**

There are three sections of the X9317: the control section, the nonvolatile memory, and the resistor array. The control section operates just like an up/down counter. The output of this counter is decoded to turn on a single electronic switch connecting a point on the resistor array to the wiper output. The contents of the counter can be stored in nonvolatile memory and retained for future use. The resistor array is comprised of 99 individual resistors connected in series. Electronic switches at either end of the array and between each resistor provide an electrical connection to the wiper pin,  $R_W$ .

The wiper acts like its mechanical equivalent and does not move beyond the first or last position. That is, the counter does not wrap around when clocked to either extreme.

The electronic switches on the device operate in a "make before break" mode when the wiper changes tap positions. If the wiper is moved several positions, multiple taps are connected to the wiper for  $t_{IW}$  (INC to V<sub>W</sub> change). The R<sub>TOTAL</sub> value for the device can temporarily be reduced by a significant amount if the wiper is moved several positions.

When the device is powered-down, the last wiper position stored will be maintained in the nonvolatile memory. When power is restored, the contents of the memory are recalled and the wiper is set to the value last stored.

### Instructions and Programming

The  $\overline{INC}$ ,  $U/\overline{D}$  and  $\overline{CS}$  inputs control the movement of the wiper along the resistor array. With  $\overline{CS}$  set LOW, the device is selected and enabled to respond to the  $U/\overline{D}$  and  $\overline{INC}$  inputs. HIGH to LOW transitions on  $\overline{INC}$  will increment or decrement (depending on the state of the  $U/\overline{D}$  input) a 7-bit counter. The output of this counter is decoded to select one of one hundred wiper positions along the resistive array.

The value of the counter is stored in nonvolatile memory whenever  $\overline{\text{CS}}$  transitions HIGH while the  $\overline{\text{INC}}$  input is also HIGH.

9

The system may select the X9317, move the wiper and deselect the device without having to store the latest wiper position in nonvolatile memory. After the wiper movement is performed as previously described and once the new position is reached, the system must keep INC LOW while taking CS HIGH. The new wiper position will be maintained until changed by the system or until a power-up/down cycle recalls the previously stored data.

This procedure allows the system to always power-up to a preset value stored in nonvolatile memory; then during system operation minor adjustments could be made. The adjustments might be based on user preference, system parameter changes due to temperature drift, etc.

The state of  $U/\overline{D}$  may be changed while  $\overline{CS}$  remains LOW. This allows the host system to enable the device and then move the wiper up and down until the proper trim is attained.

#### Mode Selection

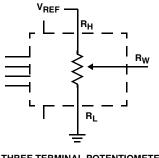

CS	INC	U/D	MODE
L	~	Н	Wiper up
L		L	Wiper down
_	Н	Х	Store wiper position to nonvolatile memory
Н	Х	Х	Standby
	L	Х	No store, return to standby
~_	L	Н	Wiper Up (not recommended)
~	L	L	Wiper Down (not recommended)

### Applications Information

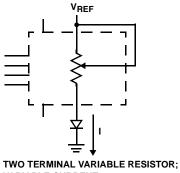

Electronic digitally controlled (XDCP) potentiometers provide three powerful application advantages:

- 1. the variability and reliability of a solid-state potentiometer,
- 2. the flexibility of computer-based digital controls, and
- 3. the retentivity of nonvolatile memory used for the storage of multiple potentiometer settings or data.

#### **Basic Configurations of Electronic Potentiometers**

### Mini Small Outline Plastic Packages (MSOP)

#### NOTES:

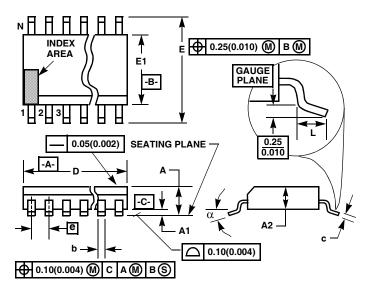

- 1. These package dimensions are within allowable dimensions of JEDEC MO-187BA.
- 2. Dimensioning and tolerancing per ANSI Y14.5M-1994.
- 3. Dimension "D" does not include mold flash, protrusions or gate burrs and are measured at Datum Plane. Mold flash, protrusion and gate burrs shall not exceed 0.15mm (0.006 inch) per side.
- 4. Dimension "E1" does not include interlead flash or protrusions and are measured at Datum Plane. <u>-H-</u> Interlead flash and protrusions shall not exceed 0.15mm (0.006 inch) per side.
- 5. Formed leads shall be planar with respect to one another within 0.10mm (0.004) at seating Plane.
- 6. "L" is the length of terminal for soldering to a substrate.
- 7. "N" is the number of terminal positions.
- 8. Terminal numbers are shown for reference only.
- Dimension "b" does not include dambar protrusion. Allowable dambar protrusion shall be 0.08mm (0.003 inch) total in excess of "b" dimension at maximum material condition. Minimum space between protrusion and adjacent lead is 0.07mm (0.0027 inch).
- 10. Datums -A and -B to be determined at Datum plane
- 11. Controlling dimension: MILLIMETER. Converted inch dimensions are for reference only.

### Thin Shrink Small Outline Plastic Packages (TSSOP)

#### NOTES:

- 1. These package dimensions are within allowable dimensions of JEDEC MO-153-AC, Issue E.
- 2. Dimensioning and tolerancing per ANSI Y14.5M-1982.
- Dimension "D" does not include mold flash, protrusions or gate burrs. Mold flash, protrusion and gate burrs shall not exceed 0.15mm (0.006 inch) per side.
- Dimension "E1" does not include interlead flash or protrusions. Interlead flash and protrusions shall not exceed 0.15mm (0.006 inch) per side.
- 5. The chamfer on the body is optional. If it is not present, a visual index feature must be located within the crosshatched area.
- 6. "L" is the length of terminal for soldering to a substrate.
- 7. "N" is the number of terminal positions.
- 8. Terminal numbers are shown for reference only.
- 9. Dimension "b" does not include dambar protrusion. Allowable dambar protrusion shall be 0.08mm (0.003 inch) total in excess of "b" dimension at maximum material condition. Minimum space between protrusion and adjacent lead is 0.07mm (0.0027 inch).
- 10. Controlling dimension: MILLIMETER. Converted inch dimensions are not necessarily exact. (Angles in degrees)
