

POWER AMPLIFIER FOR HEADPHONE STEREOS—YD7000

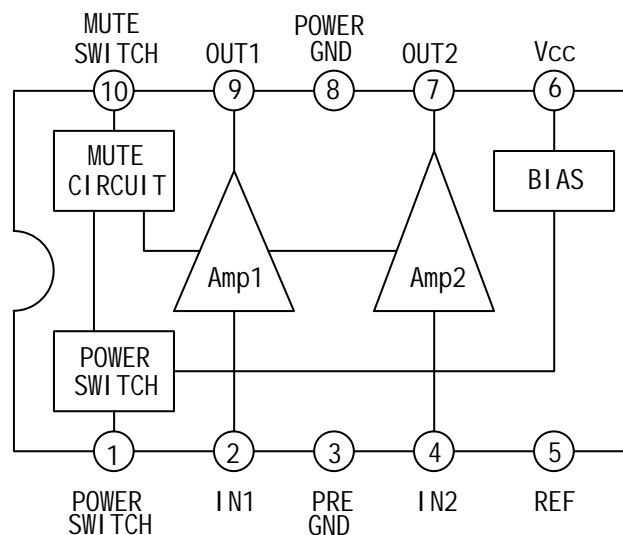

DESCRIPTION

The YD7000 is a low power audio amplifier integrated circuit for headphone. It provides differential speaker outputs to maximize output swing at low supply voltages.

FEATURES

- *Low current consumption.
- *16 load drive capability.
- *Excellent reduced voltage characteristics.
- *Excellent power supply ripple rejection.
- *Minimum number of external pares required (no input capacitor, feedback capacitor required).
- *Applicable to radio sets because of high voltage gain.
- *Less harmonic interference in radio band.
- *On-chip power switch function, muting function.
