No.11049EBT16

●Description

General-purpose BA4558 / BA4560 / BA15218 / BA14741 / BA15532 / BA4510 family and high-reliability BA4558R / BA4560R / BA4564R / BA4580R / BA4584 / BA4584R / BA8522R / BA2115 family integrate two or four independent Op-Amps on a single chip Especially, this series is suitable for any audio applications due to low noise and low distortion characteristics and are usable for other many applications by wide operating supply voltage range.
BA4558R / BA4560R / BA4564R / BA4580R / BA4584R / BA8522R / BA2115 are high-reliability products with extended operating temperature range and high ESD tolerance.

General purpose		High reliability	
Dual	BA4558F	Dual	BA4558R F/FV/FVM
Dual	BA4560F	Dual	BA4560R F/FVM
Dual	BA15218F	Quad	BA4564RFV
Quad	BA14741F	Dual	BA4580R F/FV/FVM
Dual	BA15532F	Quad	BA4584FV
Dual	BA4510F/FV	Quad	BA4584R F/FV
		Dual	BA8522R F/FV/FVM
		Dual	BA2115F/FVM

●Features

1) High voltage gain, low noise, low distortion
2) Wide operating supply voltage
   ±4.0[V]～±15.0[V](split supply)
   (BA4560/BA4558/ BA4558R/BA4560R/
   BA4564R family)
   ±2.0[V]～±16.0[V](split supply)
   (BA4580R/ BA4584/BA8522R/BA15218 family)
   ±2.0[V]～±8.5[V](split supply)(BA4584R family)
   ±2.0[V]～±18.0[V](split supply)(BA14741 family)
   ±3.0[V]～±20.0[V](split supply)(BA15532 family)
   ±1.0[V]～±3.5[V](split supply)(BA4510 family)
   ±1.0[V]～±7.0[V](split supply)(BA2115 family)
3) Internal phase compensation
4) No latch up immunity
5) Internal ESD protection
   Human body mode (HBM) ±5000[V](Typ.)
   (BA4558R/BA4560R/BA4564R/BA4580R/BA4584/
   BA4584R/BA8522R/BA2115 family)
6) Wide temperature range
   -40[℃]～+85[℃]
   (BA4558/BA4560/BA4584/BA15218/BA14741/
   BA2115 family)
   -40[℃]～+105[℃]
   (BA4558R/BA4560R/BA4564R/BA4580R/BA4584R/
   BA8522R family)

●Absolute maximum rating (Ta=25[℃])

○BA4558/BA4558R family

Parameter	Symbol	Ratings		Unit
		BA4558 family	BA4558R family	
Supply Voltage	VCC-VEE	+36		V
Differential Input Voltage(*1)	Vid	VCC-VEE	36	V
Input common-mode voltage range	Vicm	VEE～VCC	(VEE-0.3)～VEE+36	V
Operating Supply Voltage	Vopr	8～30 (±4～±15)		V
Operating Temperature	Topr	-40～+85	-40～+105	℃
Storage Temperature	Tstg	-55～+125	-55～+150	℃
Maximum Junction Temperature	Tjmax	+125	+150	℃

Note: Absolute maximum rating item indicates the condition which must not be exceeded.
Application of voltage in excess of absolute maximum rating or use out absolute maximum rated temperature environment may cause deterioration of characteristics.

(*1) The voltage difference between inverting input and non-inverting input is the differential input voltage.
Then input terminal voltage is set to more than VEE.

●Electrical characteristics

○BA4558 family (Unless otherwise specified VCC=+15[V], VEE=-15[V], Ta=25[℃])

Parameter	Symbol	Temperature Range	Limits			Unit	Condition
			BA4558F				
			Min.	Typ.	Max.		
Input Offset Voltage (*2)	Vio	25℃	-	0.5	6	mV	VOUT=0[V]
Input Offset Current (*2)	Iio	25℃	-	5	200	nA	VOUT=0[V]
Input Bias Current (*3)	Ib	25℃	-	60	500	nA	VOUT=0[V]
Supply Current	ICC	25℃	-	3	6	mA	RL=∞ All Op-Amps VIN+=0[V]
Maximum Output Voltage	VOM	25℃	±10	±13	-	V	RL≧2[kΩ]

Input Common-mode voltage range	Vicm	VEE～VCC			V
Operating Supply Voltage	Vopr	4～32 (±2～±16)	4～36 (±2～±18)	6～40 (±3～±20)	V
Input Current	Ii	-		±10	mA
Operating Temperature	Topr	-40+85		-20～+75	℃
Storage Temperature	Tstg	-55～+125			℃
Output Short Current (*24)	Iomax	±50	-		mA
Output Short Time (*24)	Ts	-	unlimited (only 1CH short)	unlimited	Sec

Note: Absolute maximum rating item indicates the condition which must not be exceeded.
Application of voltage in excess of absolute maximum rating or use out absolute maximum rated temperature environment may cause deterioration of characteristics.

(*22) The voltage difference between inverting input and non-inverting input is the differential input voltage.
Then input terminal voltage is set to more than VEE.

(*23) Don't over input current ±10mA. Built-in resistor for protection because of over current with differential input voltage above 0.5 .

(*24) Limit within Pd.

●Electrical characteristics

○BA15218 family (Unless otherwise specified VCC=+15[V], VEE=-15[V], Ta=25[℃])

Parameter	Symbol	Temperature Range	Limits			Unit	Condition
			BA15218F				
			Min.	Typ.	Max.		
Input Offset Voltage (*25)	Vio	25℃	-	0.5	5.0	mV	Rs≦10[kΩ]
Input Offset Current (*25)	Iio	25℃	-	5	200	nA

(*35) S3 is always ON for BA15532.

-Calculation-

1. Input Offset Voltage (Vio)

$$Vio = \frac{|\ VF1\ |}{1 + Rf\ /\ Rs}\ [V]$$

2. Input Offset Current (Iio)

$$Iio = \frac{|\ VF2-VF1\ |}{Ri \times (1 + Rf\ /\ Rs)}\ [A]$$

3. Input Bias Current (Ib)

$$Ib = \frac{|\ VF4-VF3\ |}{2\times Ri\times (1 + Rf\ /\ Rs)}\ [A]$$

4. Large Signal Voltage Gain (Av)

$$Av = 20\times Log\ \frac{\Delta EK\times(1+Rf/Rs)}{|VF5-VF6|}\ [dB]$$

5. Common-mode Rejection Ratio (CMRR)

$$CMRR = 20\times Log\ \frac{\Delta Vicm\times(1+Rf/Rs)}{|VF8-VF7|}\ [dB]$$

6. Power Supply Rejection Ratio (PSRR)

$$PSRR = 20\times Log\ \frac{\Delta Vcc\times(1+Rf/Rs)}{|VF10-VF9|}\ [dB]$$

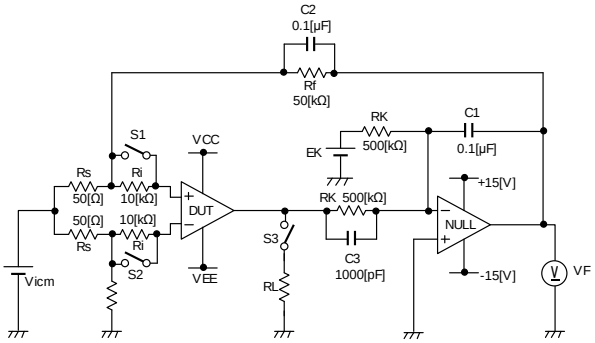

Fig. 315 Test circuit 1 (one channel only)

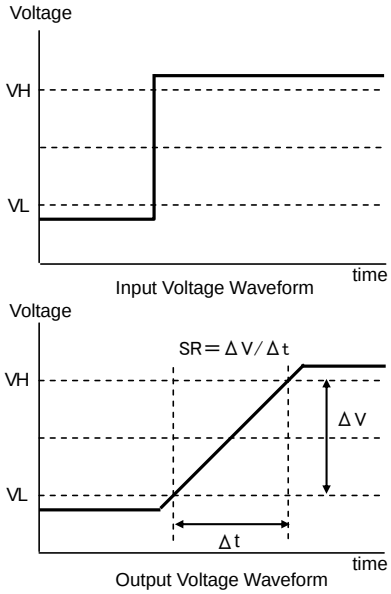

Fig. 317 Slew rate input output wave

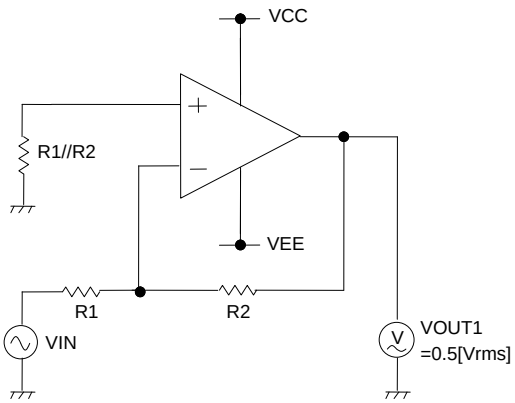
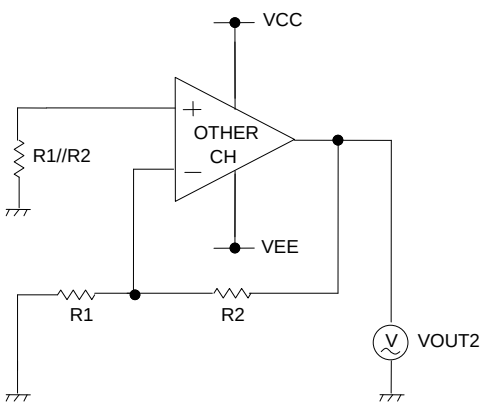
●Test circuit 3 Channel separation





$$CS = 20 \times \log \frac{100 \times VOUT1}{VOUT2}$$

Fig. 318 Test circuit 3
(VCC=+15[V], VEE=-15[V], R1=1[kΩ], R2=100[kΩ])

●Derating curve

Power dissipation (total loss) indicates the power that can be consumed by IC at Ta=25℃(normal temperature).IC is heated when it consumed power, and the temperature of IC ship becomes higher than ambient temperature. The temperature that can be accepted by IC chip depends on circuit configuration, manufacturing process, and consumable power is limited. Power dissipation is determined by the temperature allowed in IC chip (maximum junction temperature) and thermal resistance of package (heat dissipation capability). The maximum junction temperature is typically equal to the maximum value in the storage temperature range. Heat generated by consumed power of IC radiates from the mold resin or lead frame of the package. The parameter which indicates this heat dissipation capability (hardness of heat release) is called thermal resistance, represented by the symbol θj-a[℃/W]. The temperature of IC inside the package can be estimated by this thermal resistance. Fig.319 (a) shows the model of thermal resistance of the package. Thermal resistance θja, ambient temperature Ta, junction temperature Tj, and power dissipation Pd can be calculated by the equation below:

θja = (Tj-Ta) / Pd [℃/W] ・・・・・ (Ⅰ)

Derating curve in Fig.319 (b) indicates power that can be consumed by IC with reference to ambient temperature. Power that can be consumed by IC with reference to ambient temperature. Power that can be consumed by IC begins to attenuate at certain ambient temperature. This gradient is determined by thermal resistance θja. Thermal resistance θja depends on chip size, power consumption, package, ambient temperature, package condition, wind velocity, etc even when the same of package is used. Thermal reduction curve indicates a reference value measured at a specified condition. Fig.320(c), ～, (f) show a derating curve for an example of BA4558, BA4558R, BA4560, BA4560R, BA4564R, BA4580R, BA4584, BA4584R, BA8522R, BA15218, BA14741, BA15532, BA4510, BA2115.

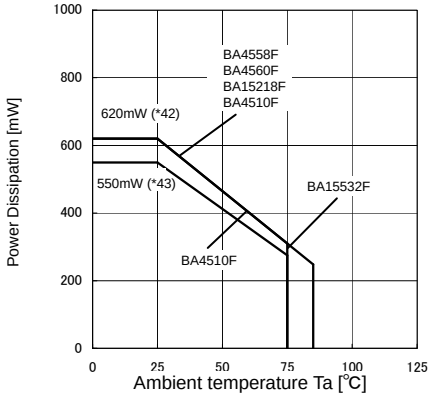
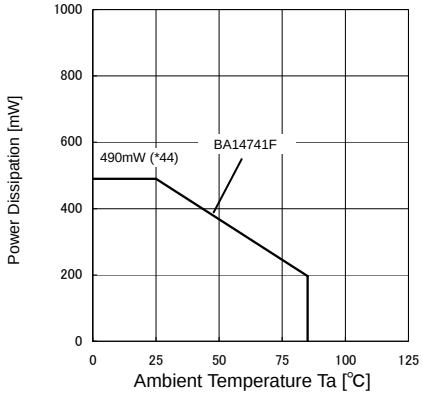
(d)BA4564R/BA4584/BA4584R family



(e)BA4558/BA4560/BA15218/BA15532/BA4510 family



(f)BA14741F

(*37)	(*38)	(*39)	(*40)	(*41)	(*42)	(*43)	(*44)	Unit
6.2	5.5	4.7	7.0	5.3	6.2	5.5	4.9	[mW/℃]

When using the unit above Ta=25[℃], subtract the value above per degree[℃]. Permissible dissipation is the value.
When FR4 glass epoxy board 70[mm]×70[mm]×1.6[mm] (cooper foil area below 3[%]) is mounted.

Fig. 320 Derating curve

●Notes for use

1) Processing of unused circuit
It is recommended to apply connection (see the Fig.321) and set the non inverting input terminal at the potential within input common-mode voltage range (Vicm), for any unused circuit.

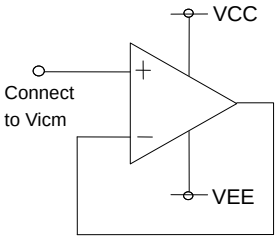


Fig. 321 The example of application circuit for unused op-amp

2) Input voltage
Applying VEE~VEE+36[V] (BA4580R, BA4584, BA4584R family), VEE+14[V] (BA2115 family) (VEE - 0.3) ~ (VEE + 36)[V]
(BA4558R, BA4560R, 4564R, BA8522R)to the input terminal is possible without causing deterioration of the electrical characteristics or destruction, irrespective of the supply voltage. However, this does not ensure normal circuit operation. Please note that the circuit operates normally only when the input voltage is within the common mode input voltage range of the electric characteristics.

3) Maximum output voltage
Because the output voltage range becomes narrow as the output current Increases, design the application with margin by considering changes in electrical characteristics and temperature characteristics.

4) Short-circuit of output terminal
When output terminal and VCC or VEE terminal are shorted, excessive Output current may flow under some conditions, and heating may destroy IC. It is necessary to connect a resistor as shown in Fig.322, thereby protecting against load shorting.

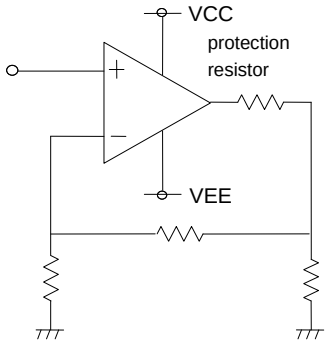

Fig. 322 The example of output short protection

5) Power supply (split supply / single supply) in used
Op-amp operates when specified voltage is applied between VCC and VEE. Therefore, the single supply Op-Amp can be used for double supply Op-Amp as well.

6) Power dissipation (Pd)
Use a thermal design that allows for a sufficient margin in light of the power dissipation (Pd) in actual operating conditions.

7) Short-circuit between pins and wrong mounting
Pay attention to the assembly direction of the ICs. Wrong mounting direction or shorts between terminals, GND, or other components on the circuits, can damage the IC.

8) Use in strong electromagnetic field
Using the ICs in strong electromagnetic field can cause operation malfunction.

9) Radiation
This IC is not designed to be radiation-resistant.

10) Handing of IC
When stress is applied to IC because of deflection or bend of board, the characteristics may fluctuate due to piezoelectric (piezo) effect.

11) Inspection on set board
During testing, turn on or off the power before mounting or dismounting the board from the test Jig. Do not power up the board without waiting for the output capacitors to discharge. The capacitors in the low output impedance terminal can stress the device. Pay attention to the electro static voltages during IC handling, transportation, and storage.

12) Output capacitor
When VCC terminal is shorted to VEE (GND) potential and an electric charge has accumulated on the external capacitor, connected to output terminal, accumulated charge may be discharged VCC terminal via the parasitic element within the circuit or terminal protection element. The element in the circuit may be damaged (thermal destruction). When using this IC for an application circuit where there is oscillation, output capacitor load does not occur, as when using this IC as a voltage comparator. Set the capacitor connected to output terminal below 0.1[μF] in order to prevent damage to IC.

●Description of electrical characteristics

Described here are the terms of electric characteristics used in this technical note. Items and symbols used are also shown. Note that item name and symbol and their meaning may differ from those on another manufacture's document or general document.

1. Absolute maximum ratings

Absolute maximum rating item indicates the condition which must not be exceeded. Application of voltage in excess of absolute maximum rating or use out of absolute maximum rated temperature environment may cause deterioration of characteristics.

1.1 Power supply voltage (VCC-VEE)
Indicates the maximum voltage that can be applied between the positive power supply terminal and negative power supply terminal without deterioration or destruction of characteristics of internal circuit.

1.2 Differential input voltage (Vid)
Indicates the maximum voltage that can be applied between non-inverting terminal and inverting terminal without deterioration and destruction of characteristics of IC.

1.3 Input common-mode voltage range (Vicm)
Indicates the maximum voltage that can be applied to non-inverting terminal and inverting terminal without deterioration or destruction of characteristics. Input common-mode voltage range of the maximum ratings not assure normal operation of IC. When normal operation of IC is desired, the input common-mode voltage of characteristics item must be followed.

1.4 Power dissipation (Pd)
Indicates the power that can be consumed by specified mounted board at the ambient temperature 25℃(normal temperature). As for package product, Pd is determined by the temperature that can be permitted by IC chip in the package (maximum junction temperature)and thermal resistance of the package.

2. Electrical characteristics item

2.1 Input offset voltage (Vio)
Indicates the voltage difference between non-inverting terminal and inverting terminal. It can be translated into the input voltage difference required for setting the output voltage at 0 [V] .

2.2 Input offset current (Iio)
Indicates the difference of input bias current between non-inverting terminal and inverting terminal.

2.3 Input bias current (Ib)
Indicates the current that flows into or out of the input terminal. It is defined by the average of input bias current at non-inverting terminal and input bias current at inverting terminal.

2.4 Input common-mode voltage range(Vicm)
Indicates the input voltage range where IC operates normally.

2.5 Large signal voltage gain (AV)
Indicates the amplifying rate (gain) of output voltage against the voltage difference between non-inverting terminal and Inverting terminal. It is normally the amplifying rate (gain) with reference to DC voltage.
Av = (Output voltage fluctuation) / (Input offset fluctuation)

2.6 Circuit current (ICC)
Indicates the IC current that flows under specified conditions and no-load steady status.

2.7 Output sink current (IOL)
Denotes the maximum current that can be output under specific output conditions.

2.8 Output saturation voltage low level output voltage (VOL)
Signifies the voltage range that can be output under specific output conditions.

2.9 Output leakage current, High level output current (I leak)
Indicates the current that flows into IC under specified input and output conditions.

2.10 Common-mode rejection ratio (CMRR)
Indicates the ratio of fluctuation of input offset voltage when in-phase input voltage is changed. It is normally the fluctuation of DC.
CMRR = (Change of Input common-mode voltage) / (Input offset fluctuation)

2.11 Power supply rejection ratio (PSRR)
Indicates the ratio of fluctuation of input offset voltage when supply voltage is changed. It is normally the fluctuation of DC.
PSRR = (Change of power supply voltage) / (Input offset fluctuation)

○Voltage follower

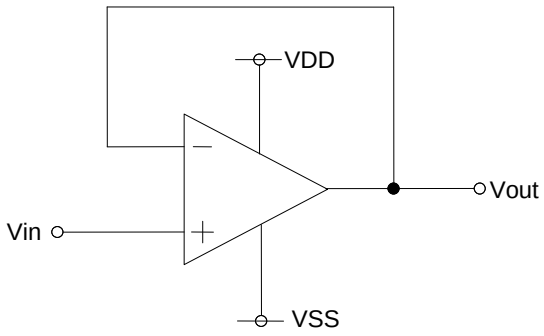

Fig. 323 Voltage follower circuit

Voltage gain is 0 [dB].
This circuit controls output voltage (Vout) equal input voltage (Vin), and keeps Vout with stable because of high input impedance and low output impedance.
Vout is shown next formula.
Vout=Vin

○Inverting amplifier

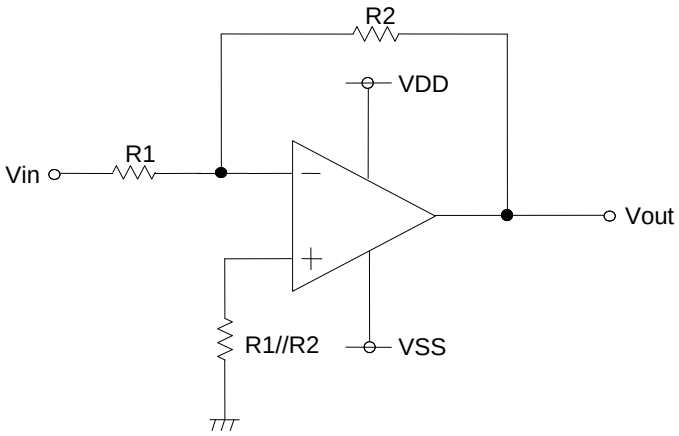

Fig. 324 Inverting amplifier circuit

For inverting amplifier, Vi(b) Derating curve voltage gain decided R1 and R2, and phase reversed voltage is outputted.
Vout is shown next formula.
Vout=-(R2/R1)・Vin
Input impedance is R1.

○Non-inverting amplifier

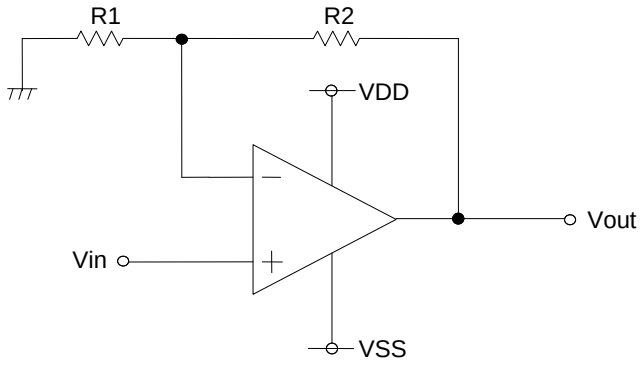

Fig. 325 Non-inverting amplifier circuit

For non-inverting amplifier, Vin is amplified by voltage gain decided R1 and R2, and phase is same with Vin.
Vout is shown next formula.
Vout=(1 + R2/R1)・Vin
This circuit realizes high input impedance because Input impedance is operational amplifier's input Impedance.

Notice

Precaution on using ROHM Products

1. Our Products are designed and manufactured for application in ordinary electronic equipments (such as AV equipment, OA equipment, telecommunication equipment, home electronic appliances, amusement equipment, etc.). If you intend to use our Products in devices requiring extremely high reliability (such as medical equipment (Note 1), transport equipment, traffic equipment, aircraft/spacecraft, nuclear power controllers, fuel controllers, car equipment including car accessories, safety devices, etc.) and whose malfunction or failure may cause loss of human life, bodily injury or serious damage to property ("Specific Applications"), please consult with the ROHM sales representative in advance. Unless otherwise agreed in writing by ROHM in advance, ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties arising from the use of any ROHM's Products for Specific Applications.

(Note1) Medical Equipment Classification of the Specific Applications

JAPAN	USA	EU	CHINA
CLASSⅢ	CLASSⅢ	CLASSⅡb	CLASSⅢ
CLASSⅣ		CLASSⅢ	

2. ROHM designs and manufactures its Products subject to strict quality control system. However, semiconductor products can fail or malfunction at a certain rate. Please be sure to implement, at your own responsibilities, adequate safety measures including but not limited to fail-safe design against the physical injury, damage to any property, which a failure or malfunction of our Products may cause. The following are examples of safety measures:
   [a] Installation of protection circuits or other protective devices to improve system safety
   [b] Installation of redundant circuits to reduce the impact of single or multiple circuit failure

3. Our Products are designed and manufactured for use under standard conditions and not under any special or extraordinary environments or conditions, as exemplified below. Accordingly, ROHM shall not be in any way responsible or liable for any damages, expenses or losses arising from the use of any ROHM's Products under any special or extraordinary environments or conditions. If you intend to use our Products under any special or extraordinary environments or conditions (as exemplified below), your independent verification and confirmation of product performance, reliability, etc, prior to use, must be necessary:
   [a] Use of our Products in any types of liquid, including water, oils, chemicals, and organic solvents
   [b] Use of our Products outdoors or in places where the Products are exposed to direct sunlight or dust
   [c] Use of our Products in places where the Products are exposed to sea wind or corrosive gases, including Cl_2, H_2S, NH_3, SO_2, and NO_2
   [d] Use of our Products in places where the Products are exposed to static electricity or electromagnetic waves
   [e] Use of our Products in proximity to heat-producing components, plastic cords, or other flammable items
   [f] Sealing or coating our Products with resin or other coating materials
   [g] Use of our Products without cleaning residue of flux (even if you use no-clean type fluxes, cleaning residue of flux is recommended); or Washing our Products by using water or water-soluble cleaning agents for cleaning residue after soldering
   [h] Use of the Products in places subject to dew condensation

4. The Products are not subject to radiation-proof design.

5. Please verify and confirm characteristics of the final or mounted products in using the Products.

6. In particular, if a transient load (a large amount of load applied in a short period of time, such as pulse. is applied, confirmation of performance characteristics after on-board mounting is strongly recommended. Avoid applying power exceeding normal rated power; exceeding the power rating under steady-state loading condition may negatively affect product performance and reliability.

7. De-rate Power Dissipation (Pd) depending on Ambient temperature (Ta). When used in sealed area, confirm the actual ambient temperature.

8. Confirm that operation temperature is within the specified range described in the product specification.

9. ROHM shall not be in any way responsible or liable for failure induced under deviant condition from what is defined in this document.

Precaution for Mounting / Circuit board design

1. When a highly active halogenous (chlorine, bromine, etc.) flux is used, the residue of flux may negatively affect product performance and reliability.

2. In principle, the reflow soldering method must be used; if flow soldering method is preferred, please consult with the ROHM representative in advance.

For details, please refer to ROHM Mounting specification

Precautions Regarding Application Examples and External Circuits

1. If change is made to the constant of an external circuit, please allow a sufficient margin considering variations of the characteristics of the Products and external components, including transient characteristics, as well as static characteristics.

2. You agree that application notes, reference designs, and associated data and information contained in this document are presented only as guidance for Products use. Therefore, in case you use such information, you are solely responsible for it and you must exercise your own independent verification and judgment in the use of such information contained in this document. ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties arising from the use of such information.

Precaution for Electrostatic

This Product is electrostatic sensitive product, which may be damaged due to electrostatic discharge. Please take proper caution in your manufacturing process and storage so that voltage exceeding the Products maximum rating will not be applied to Products. Please take special care under dry condition (e.g. Grounding of human body / equipment / solder iron, isolation from charged objects, setting of Ionizer, friction prevention and temperature / humidity control).

Precaution for Storage / Transportation

1. Product performance and soldered connections may deteriorate if the Products are stored in the places where:
   - [a] the Products are exposed to sea winds or corrosive gases, including Cl2, H2S, NH3, SO2, and NO2
   - [b] the temperature or humidity exceeds those recommended by ROHM
   - [c] the Products are exposed to direct sunshine or condensation
   - [d] the Products are exposed to high Electrostatic

2. Even under ROHM recommended storage condition, solderability of products out of recommended storage time period may be degraded. It is strongly recommended to confirm solderability before using Products of which storage time is exceeding the recommended storage time period.

3. Store / transport cartons in the correct direction, which is indicated on a carton with a symbol. Otherwise bent leads may occur due to excessive stress applied when dropping of a carton.

4. Use Products within the specified time after opening a humidity barrier bag. Baking is required before using Products of which storage time is exceeding the recommended storage time period.

Precaution for Product Label

QR code printed on ROHM Products label is for ROHM's internal use only.

Precaution for Disposition

When disposing Products please dispose them properly using an authorized industry waste company.

Precaution for Foreign Exchange and Foreign Trade act

Since our Products might fall under controlled goods prescribed by the applicable foreign exchange and foreign trade act, please consult with ROHM representative in case of export.

Precaution Regarding Intellectual Property Rights

1. All information and data including but not limited to application example contained in this document is for reference only. ROHM does not warrant that foregoing information or data will not infringe any intellectual property rights or any other rights of any third party regarding such information or data. ROHM shall not be in any way responsible or liable for infringement of any intellectual property rights or other damages arising from use of such information or data.:

2. No license, expressly or implied, is granted hereby under any intellectual property rights or other rights of ROHM or any third parties with respect to the information contained in this document.

Other Precaution

1. This document may not be reprinted or reproduced, in whole or in part, without prior written consent of ROHM.

2. The Products may not be disassembled, converted, modified, reproduced or otherwise changed without prior written consent of ROHM.

3. In no event shall you use in any way whatsoever the Products and the related technical information contained in the Products or this document for any military purposes, including but not limited to, the development of mass-destruction weapons.

4. The proper names of companies or products described in this document are trademarks or registered trademarks of ROHM, its affiliated companies or third parties.

General Precaution

1. Before you use our Products, you are requested to carefully read this document and fully understand its contents. ROHM shall not be in any way responsible or liable for failure, malfunction or accident arising from the use of any ROHM's Products against warning, caution or note contained in this document.

2. All information contained in this document is current as of the issuing date and subject to change without any prior notice. Before purchasing or using ROHM's Products, please confirm the latest information with a ROHM sales representative.

3. The information contained in this document is provided on an "as is" basis and ROHM does not warrant that all information contained in this document is accurate and/or error-free. ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties resulting from inaccuracy or errors of or concerning such information.
